INTRODUCTION

In his 1998 Fairchild Lecture, Professor Marc Galanter proposed the idea that senior attorneys should be encouraged to undertake “a second ‘public service’ career” as a way of transitioning to retirement. The logic for encouraging such “second acts” in lawyers’ careers is compelling. As Professor Galanter has demonstrated, in the coming years, there will be record numbers of attorneys navigating the transition to retirement as the “Baby Boomers” reach their golden years. This substantial body of highly skilled lawyers could have a significant impact on fulfilling unmet needs for legal representation. If even five percent of the practicing attorneys over sixty-five participated in such a program, this would double the number of attorneys working primarily on public interest work by as soon as 2011. Such work could provide personal renewal and fulfillment as a capstone in the careers of this idealistic generation. Moreover, if such a movement were embraced and systematized by the legal profession, it could provide substantial benefits to firms and the profession as a whole. While facilitating the retirement of an unprecedented number of senior attorneys, “Second Acts” programs would allow those senior attorneys to retain contact with their clients while those clients transfer to other attorneys in the firm, and would allow senior attorneys to focus on training and mentoring junior associates through pro bono work. This work would also help meet the pro bono obligations of firms and the profession as a whole.

To further explore and facilitate the development of such Second Acts programs, the Pro Bono Institute has undertaken a survey of law firms regarding the magnitude of their current concerns in facilitating the retirement of senior attorneys, benefits to attorneys and firms in

7 The National Law Journal estimates that by 2011 about one quarter of the nation’s one million lawyers will be over 65. Leigh Jones, Law Firm Retirement Policies to be Hot Issue at Annual ABA Meeting, NAT’L L.J., Aug. 7, 2007 [hereinafter Jones, Retirement Policies]. Currently “public interest attorneys” account for about 1% of those million lawyers, or 10,000 lawyers. Galanter, supra note 5, at 1103. Accordingly, 5% of the 250,000 practicing lawyers over sixty-five in 2011 would amount to approximately 12,500 public interest lawyers, more than doubling the number of public interest lawyers in the country. It should be noted that it is estimated that the number of attorneys over fifty will exceed 500,000 by as soon as 2020. The Law’s “Gray” Area, http://www.mayerbrown.com/publications/article.asp?id=1452&nid=6 (last visited Dec. 1, 2008).
establishing such programs, and possible problems to be addressed in the development of such programs. In this article, we present the results of the Institute’s survey, along with the other existing arguments and data supporting the establishment of Second Acts programs and suggest how they might most usefully be constructed. In the first section of this article, we present the existing data and literature concerning the establishment of Second Acts programs. This discussion not only summarizes the existing literature but also serves as a basis for the discussion of our survey. In the second section, we present and discuss the results of our survey. These results suggest that there is indeed a need for and interest in Second Acts programs that will facilitate the transition of attorneys into retirement with personally and socially meaningful work, and that firms believe that such programs will meet some of the firms’ practical business needs. Finally this article offers its conclusions regarding the desirability and optimal form of Second Acts programs based on the survey’s findings.

I. THE EXISTING LITERATURE IN SUPPORT OF SECOND ACTS\textsuperscript{SM}
PROGRAMS: “TALKING ‘BOUT MY GENERATION”\textsuperscript{8}

A. The “Graying” of the Legal Profession: “Will you still need me, will you still feed me, when I’m 64?”\textsuperscript{9}

The current demographics of the legal profession are dominated by the Baby Boom generation.\textsuperscript{10} Beginning in 1960, the number of students admitted to law school each year increased steadily from 15,607 to 34,289 in 1970, and in 1980 reached 40,000 admitted students.\textsuperscript{11} With these large new cohorts entering the legal profession and much smaller cohorts departing (by abandonment, retirement, or death), the size of the bar grew from less than one quarter million in 1960 to half a million in 1980 and then grew to one million in 1999.\textsuperscript{12} Moreover, as the “bulge” of the Baby Boomers proceeded through their careers, the average age of lawyers first grew younger and then older. The median age of lawyers dropped from forty-six in 1960 to thirty-nine in 1980, but since that time the median age has risen and currently stands at

\textsuperscript{12} Id.
about forty-one.\footnote{See Clara Carson, The Lawyer Statistical Reporter: The U.S. Legal Profession in 1995 \textit{4} (American Bar Foundation 1999); see also Back to the Future, http://calbar.ca.gov/calbar/2cjb/96jan/caljnl.htm (follow “Back to the future . . .” hyperlink) (last visited Dec. 2, 2008).} Surveys cited by the National Law Journal and the New York Times estimate that by 2011, nearly one quarter of the nation’s one million attorneys will be sixty-five or older.\footnote{Jones, Retirement Policies, supra note 7.} A recent survey of Am Law 200 firms by the American Lawyer shows that in 69% of the surveyed firms, 20-39% of equity partners are age fifty or older, and in 23% of the firms, more than 40% of the equity partners are age fifty or older.\footnote{Elizabeth Goldberg, \textit{Gray Matters}, \textit{The Am. Law.}, Dec. 1, 2007, http://www.law.com/jsp/PubArticle.jsp?id=900005497467 (last visited Dec. 2, 2008).} Examining the impact of these changes on the ratio of older lawyers to younger lawyers in the profession, Professor Galanter has shown that the number of older lawyers (in their fifties) for each one hundred younger lawyers (in their thirties) fell dramatically from seventy-nine in 1970 to just thirty-five in 1985, before it rose again to fifty in 1995 and seventy-nine in 2005—the same ratio as existed in 1970.\footnote{Galanter, \textit{supra} note 5, at 1085.} Galanter projects that, absent an unforeseen increase in younger lawyers, by 2020 there will be ninety-seven older lawyers for every one hundred younger lawyers in the United States.\footnote{Id.}

At the same time that the number and proportion of senior attorneys in the profession have grown, the demand for such attorneys in traditional private practice has declined. Although senior attorneys still play critical roles in their firms because of their expertise, experience, and ties to clients, there is not enough traditional private practice work to maintain this many senior lawyers, at least not in the manner to which they have become accustomed. Despite the fact that the market for legal services has doubled since 1967,\footnote{In 1967 legal services constituted 0.64% of GDP, but by 1997 they had grown to 1.3% of GDP. \textit{Id.} at 1089-90.} the demand for senior attorneys in their traditional paid positions has not kept pace. This is because most of the growth in demand for legal services has occurred among corporations and organizations that employ larger private firms, rather than among individual clients that employ smaller firms or individual attorneys.\footnote{Id.} Under the “tournament of lawyers,” which determines partnership, large private firms require fewer senior attorneys and
a lower ratio of senior attorneys to junior attorneys than small private firms in order to maintain large firm organizational structure and high levels of partner pay.\textsuperscript{20} The recent dramatic growth in firm size and partner compensation has only accentuated this effect. In 1960, only about 2\% of the legal profession worked in firms of more than fifty lawyers, while by 1991 over 18\% of the legal profession worked in this setting.\textsuperscript{21} Thus, just at the time when the demographics of the legal profession have produced a very large pool of senior lawyers, the proportion of the legal profession that is needed to remain in senior positions to supervise paid work and to be well compensated for this work is declining.\textsuperscript{22}

The mismatch between the profession’s current age distribution and the needs of large private firms has not been lost on those firms. The American Lawyer survey of Am Law 200 firms shows that respondents for 38\% of the surveyed firms said that the graying of the profession was a significant management problem for their firm.\textsuperscript{23} Although the experience and skills of senior attorneys are still crucial to firm success, firms have recently placed more pressure on senior partners to generate higher revenues, accept a lower share of firm profits, or retire. Firm retirement policies have increasingly been used to either terminate partnership rights or decrease attorney shares in equity profits at a prefixed rate until the attorney must leave the partnership. The details of these policies vary; some firms require the retiree to leave the firm, others allow the retiree to stay at the firm as “special counsel,” and many require non-compete agreements.\textsuperscript{24} In a survey of law firms composed of one hundred or more attorneys, the New York Times reports that almost 60\% had implemented mandatory retirement policies ranging from caps on benefits to termination.\textsuperscript{25} The most notorious of these policies—Sidley Austin Brown $&$ Wood’s demotion of thirty-one part-

\textsuperscript{23} Goldberg, supra note 15.

\textsuperscript{24} Galanter, supra note 5, at 1089-90.

\textsuperscript{25} Julie Creswell $&$ Karen Donovan, Happy Birthday, Vacate Your Office, N.Y. TIMES, Dec. 8, 2006, at C1; see also Emma Schwartz, Former Akin Gump Attorney Accuses Firm of Age Discrimination, LEGAL TIMES, Mar. 6, 2007, http://www.law.com/jsp/article.jsp?id=1173101897167 (last visited Dec. 2, 2008). In their National Law Journal survey, Altman $&$ Weil found that over half of all large law firms (100+ lawyers) have mandatory retirement policies in place, with most firms requiring retirement by age seventy. See Report of the American Bar Asso-
ners—was investigated by the Equal Employment Opportunity Commission in 2002 and settled in October 2007 for $27 million.\textsuperscript{26} On August 14, 2006, the American Bar Association adopted Proposal 10A, recommending that firms do away with age-based retirement policies.\textsuperscript{27} Some firms have already begun to move away from mandatory to discretionary retirement policies. For example, last year the firm of Pillsbury, Winthrop, Shaw & Pittman voted to do away with their mandatory retirement policy and adopt one based on individually designed retirement plans.\textsuperscript{28} Similarly, the firm of K & L Gates recently did away with its policy requiring attorneys to give up equity partner status at seventy.\textsuperscript{29} Yet, as experienced professionals in the field, older lawyers are an invaluable resource. Thus, the question remains: Is there a more constructive use of their skills?

B. The Case for Second Acts Programs: "I've changed the tune I dance to/ In this gay old social whirl/ But if I get a chance to/ I might just change the world"\textsuperscript{30}

The current mismatch in the supply and demand for traditional private practice work by senior attorneys presents not only a challenge but also a tremendous opportunity. If not all of these experienced attorneys are needed to represent traditional private practice and corporate clients, certainly their skills can be usefully employed in the cause of public interest work. Not only will these lawyers find such work personally rewarding, but also their labors would help meet society's interests in legal representation for all. The current demographics and market conditions provide a unique opportunity to institute Second Acts programs to engage senior attorneys in second careers in public service before they retire. Second Acts programs could also be of use to firms in transitioning attorneys to retirement, providing continuity for clients, providing training and mentoring opportunities for young attor-

neys, and meeting the firm’s professional obligation to provide pro bono services.

As people live longer and come to enjoy productive years beyond the typical work life, they are naturally looking for new ways to find personal fulfillment and meaning in the last half of their lives. In his book *Encore*, Marc Freedman tells the stories of “encore career pioneers,” described as “men and women moving beyond midlife careers . . . searching for a calling in the second half of life.” For lawyers who have been ambitious self-starters their whole careers, the natural avenue for finding new meaning and renewal is through their work. Freedman describes the challenge of many professionals who enter their primes later in their careers. The encore career pioneers “challenge us in a fundamental way: How might we develop a vision and realize a reality of work in the second half of life that makes a genuine virtue out of the growing necessity of extended working lives?” A second career in public service under a Second Acts program could be one way lawyers answer this question. Empirical evidence suggests that pro bono work adds to career satisfaction and fulfillment, especially for large firm attorneys.

Moreover, there is a paramount and growing need for greater commitment to pro bono work in the legal profession. Since the founding of our republic, the legal system has been the bedrock of our democratic principles. Thus, adequate legal representation for all is key to a free democratic society. The American Bar Association’s Model Rules of Professional Conduct reflect the importance of pro bono services. Under Model Rule 6.1, every lawyer is asked to perform at least fifty hours of pro bono work annually. However, in recent years, increased pressure to log billable hours in private firms has discouraged attorneys from performing such work. Full-time public interest attorneys cannot take up the slack. Less than 1% of the nation’s attorneys perform full-time public interest law work, and since 1982, funding for public in-

---

32 Id.
36 Galanter, supra note 5, at 1103.
terest law initiatives has been cut in half. As a consequence, the ABA, in a recent report, found that four out of five poor persons have no access to legal representation. Second Acts programs can help meet this growing need for legal representation for the poor.

Second Acts programs also promise benefits for firms. With the threat of lawsuits similar to that in the Sidley case, law firms are looking for gentler ways to help senior attorneys transition into retirement. By supporting such second careers with office space, secretarial support, malpractice insurance, and a reasonable fixed salary, firms can create an intermediate status between partnership and retirement that would be attractive to public-minded lawyers. Moreover, in this intermediate status, the senior attorneys can be of great use to the firm. The attorneys will still be in the office regularly, so they can maintain contact with personal clients as those clients transition to other attorneys in the firm. Without the constant pressure to meet billable hours, the senior attorneys can increase the time they spend training and mentoring junior attorneys—through the medium of pro bono cases. Younger attorneys appreciate the chance to learn and achieve fulfillment through pro bono work. Moreover, mentorship is an important determinant of young lawyer success. As a result, the increased emphasis on pro bono work and education that a Second Acts program can bring to a law firm can serve as a recruiting magnet for the firm.

There will undoubtedly be costs for firms who undertake Second Acts programs. Office space, support, and salaries are not free. However, it seems plausible that firm benefits will be commensurate with or even greater than the costs. Furthermore, a Second Acts program can help the members of a firm meet their professional obligation to provide pro bono representation to those members of society who otherwise could not afford legal representation.

Others have recognized that now is an opportune time to encourage people to undertake "second careers" in public service for per-
sonal benefit and the benefit of society. In the late 1990's, Marc Freedman and John Gardner organized "Civic Ventures," a think tank dedicated to helping society make the most use of the "experience dividend," which we now enjoy from having so many healthy and experienced workers in the population. Civic Ventures has developed several broad-based initiatives to encourage and reward socially productive work in a "second career," including "Experience Corps," "Lead With Experience," and "The Purpose Prize." A variety of programs are already underway to encourage doctors and other healthcare professionals to provide healthcare for the uninsured later in their careers as a means of providing personally rewarding and socially valuable work. Within the legal profession, the luminaries of the D.C. Bar have already recognized the logic of such programs and have developed the "Senior Lawyer Public Interest Project" that facilitates pro bono and public interest work by senior attorneys. Like-minded lawyers in New York have created an ambitious "International Senior Lawyers Project" to provide pro bono services to the world at large. The American Bar Association has developed the Commission on Second Season of Service to encourage work on such programs.

II. THE PRO BONO INSTITUTE'S SECOND ACTS PROJECTSM LAW FIRM SURVEY

In order to explore and promote the idea of Second Acts programs based on pro bono work by senior attorneys, the Pro Bono Institute undertook a survey of firm practices and attitudes concerning attorney retirement and the desirability of a Second Acts program. The survey was supported by a generous grant from the firm of Mayer Brown LLP. The organizer of the survey hoped that the survey would provide useful

---

42 Id.
information on the need for and interest in Second Acts programs among major firms with a commitment to public interest work. Hopefully, the survey might also suggest some ways in which the Pro Bono Institute can help firms undertake such programs.

Established in 1996, the Pro Bono Institute ("The Institute") is a non-profit organization dedicated to identifying and exploring new approaches to the provision of legal services to the poor, disadvantaged, and other groups and individuals unable to secure legal assistance. In 2005, the Institute launched the Second Acts Project in order to develop, test, evaluate, and replicate a variety of effective models that facilitate lawyers' transition from commercial private practice to public service and pro bono practice. By working with its core constituencies—major law firms, corporate legal departments, and public interest organizations—the Institute hopes to use this project to create workable models and programs that facilitate increased pro bono services. The Institute undertook this survey as one of its initial efforts in the Second Acts Project to learn about current major law firm policies and practices regarding transitioning attorneys to retirement and encouraging pro bono work. The results of the survey will serve as the basis for discussions with experts from prominent firms, corporations, and with public interest leaders, to develop and implement a series of pilot projects that will test the viability of various models of public interest law practice. Possible pilot projects include: senior sabbatical programs that assign veteran attorneys to work for a substantial period of time in a public interest organization; "snowbird" programs in which firms with offices in sunbelt communities host senior attorneys to do pro bono work in those offices; and "senior attorney" pro bono programs in which law firms develop policies that permit attorneys, who would otherwise fully retire, to maintain a presence at the firm while spending a majority, if not all, of their time working on pro bono matters.

A. The Form of the Survey

The survey was constructed in six parts. In part one, the Institute asked questions about the firm and the person who was completing the form: the position of the responder within the firm; the firm's legal organization; the number of attorneys in the firm; the locations of the

---

firm's offices; and the percentage of full-time and part-time attorneys in the firm who were fifty-five to sixty-four years old, sixty-five to seventy-four years old, and seventy-five years old or above. In part two, the Institute asked questions about the firm's recent retirees: at what ages they partially or completely retired and whether the firm provided financial incentives to induce retirement. In part three, the Institute asked questions about the firm's retirement practices: whether the firm has a written retirement program; does that program have mandatory or target retirement ages; what was the legal structure of any pension or retirement savings plan; were health care benefits provided to retirees; had the firm recently adopted, changed or done away with a retirement plan; and what were the customary benefits afforded for retired attorneys to maintain contact with the firm? In the fourth part, the Institute asked whether the firm had any existing programs to transition attorneys into retirement. The specific questions regarded the following: the form of such programs; what age such transition typically begins; and were these programs promoted as pro bono work? In part five, the Institute asked about the firm's existing programs to promote pro bono work, who did this work, and what kind of work has been done. The questions in part five concerned the following: the resources the firm committed to pro bono work, the number of senior attorneys participating in such work, firm methods to recruit senior attorneys to perform pro bono work, areas of the law that were amenable to pro bono work by senior attorneys, the firm's efforts to partner with public interest firms in conducting pro bono work, and any problems the firms had encountered in the pro bono efforts. In the final part, the Institute asked the respondent's opinion of the likely interest of the firm's senior attorneys in a Second Acts program and whether the respondent foresaw any advantages or problems in establishing such a program. The Institute received survey responses from forty-five of the firms that participate in its Law Firm Pro Bono ChallengeSM program.49

49 In 1993, the Pro Bono Institute created the Law Firm Pro Bono ChallengeSM—a global "pro bono challenge" to encourage the provision of pro bono legal services. As of 2006, the Pro Bono Challenge had over 150 signatories. Under the Pro Bono Challenge, law firms pledge either three percent or five percent of their annual billable hours to pro bono work or sixty or one-hundred hours per attorney. More information about the Pro Bono Challenge can be found at the Pro Bono Institute's website, http://www.probonoinst.org/challenge.php.
B. The Results of the Survey

Because of the Institute's focus, the respondents are all large law firms. Nevertheless, there is a fair amount of diversity among the respondents to the survey. The size of the firms varies from fifty attorneys to 1598 attorneys, with a mean number of 391 attorneys. The primary offices of the responding firms range across all of the major metropolitan areas of the country, from Los Angeles to Salt Lake City, St. Louis, Chicago, New York City, and Washington, D.C. Most of the firms are organized as partnerships (88.4%), although there is significant representation from firms organized as corporations (11.6%). The person who actually completed the form is most often the partner in charge of pro bono work (47.6%), although responses by managing partners are also common (23.8%), and there is representation by people who identify themselves merely as "partners" and human resources specialists.

The respondents reported problems and concerns about efficiently using a growing number of senior attorneys like those reflected in the aggregate statistics presented in the prior section. As shown in Table 1 below, 18.2% of the attorneys in the examined firms are fifty-five years or older, with 13.9% being fifty-five to sixty-four years old, 3.3% being sixty-five to seventy-four years old, and 1.0% being seventy-five years of age or more. Also reflected in Table 1, part-time employment grows among practicing attorneys as they age: 5.8% among attorneys ages fifty-five to sixty-four, 33.3% among attorneys ages sixty-five to seventy-four, and 60% among attorneys seventy-five years of age or older. Based on the survey responses for the last six retirees in each firm, the average age at which attorneys retire is 65.7 years. The firms show some concern with the problem of transitioning these large numbers of attorneys to retirement. Within the last five years, a full 78.4% of the firms report offering special financial incentives to encourage attorneys to retire.
The firms also report a wide variety of existing retirement programs. The vast majority of the firms (78.4%) report that they have a written retirement program to provide income and/or benefits to retirees. Of those firms, 42.9% report that they have a mandatory retirement age, which on average is 66.8 years old, while 32.1% report having an express “target” retirement age, which on average is 66.4 years old. The firms with written retirement programs also report a variety of methods for providing income and benefits, with most firms using more than one method. As reported in Table 2 below, 26.4% of the firms have a pension that is a traditional defined benefit plan, 44.8% have a pension that is a defined contribution plan, and 32.1% have an unqualified plan. On top of these pension plans, 24.1% of the firms have some program for profit sharing with retired partners, and 93.1% have a 401(k) retirement savings program. Among those who report no written retirement plan, some say they have no customary plan (“we work until we drop”), but most describe informal profit sharing plans or 401(k) plans (which we would assume are in writing). There is some evidence of turmoil among the firms in providing retirement benefits. Two firms report doing away with written retirement plans within the

---

50 Under the Employee Retirement Income Security Act (ERISA), a “defined contribution” plan is a pension plan “which provides for an individual account for each participant and for benefits based solely upon the amount contributed to the participant’s account.” 29 U.S.C. § 1002(34) (2008). A “defined benefit” plan is a pension plan “other than an individual account plan,” in which the firm promises a certain retirement benefit in exchange for service and itself invests money to pay those future benefits. 29 U.S.C. § 1002(35) (2008). An “unqualified plan” is any pension plan that does not meet the requirements of ERISA and thus does not qualify for a tax deduction.

51 Of those respondents who describe their 401(k) programs, about eighty percent have some mandatory or matching employer contribution.
last 10 years, while only one firm reports adding one. Moreover, among those firms with written plans, 17.3% report reducing retirement benefits by more than 10% within the last ten years, while no firms report increasing retirement benefits by 10% or more over the last ten years.

The firms in our sample report other benefits for retirees, either to maintain income and benefits in retirement or to allow the retired attorneys to maintain some connections with the firm and the practice of law. The incidence of these “other benefits” among the firms with written retirement plans is reported in Table 3. As observed in Table 3, 25.8% of the firms provide at least some retirees with additional income during retirement, while 45.2% of the firms provide health insurance and/or life and disability insurance for at least some portion of the retirement. To allow and encourage retirees to maintain some connection with the firm and the practice of law, 58.1% of the firms provide retirees with malpractice insurance, and over 80% of the firms allow retirees to maintain their office and have access to administrative staff and supplies. About a third of the firms also provide educational or training opportunities for retirees and include them in firm meetings, firm feedback, and firm recognition.
The firms in our survey already have some means to help transition attorneys to retirement. As represented in Table 4, 76.2% of the firms report having previously negotiated reduced work for reduced pay arrangements for senior attorneys. Other such programs are much less common, although not rare. Among the firms, 9.5% report having negotiated deals with retiring attorneys, in which the attorney helps transition clients to other attorneys in the firm in return for income. Some firms report already having programs somewhat similar to those of a Second Acts program in that 7.1% report instances of supporting senior attorneys in pro bono work as they transition to retirement, and 14.3% report negotiating deals in which senior attorneys agree to focus on training and/or mentoring associates in return for income. Another 15.2% of the firms report having programs or initiatives to encourage senior attorneys to participate in pro bono work, although these programs are not connected to transitioning these attorneys to retirement. Among the firms that have "programs" to help attorneys transition to retirement, 33.3% of the firms said that they have a specific age at which the discussions about transitioning to retirement begin, and the average age given by these firms was 63.3 years old. Almost 17% of the firms report having no program or initiative to help senior lawyers transition to retirement.
The fifteen firms in our survey who report some program or initiative to encourage senior attorneys to participate in pro bono work use a wide variety of means to support and encourage such work. As represented in Table 5, almost all of the firms report providing administrative support, working space, supplies, and malpractice coverage to support such work. Two-thirds of the firms provide training to senior attorneys in particular areas of law or procedures in order to facilitate their pro bono work. Fewer firms provide substantial income or benefits to support such work, with only one-third giving senior attorneys credit towards billable hour objectives for pro bono work. Among these firms, 60% provide feedback and recognition within the firm for pro bono work, and 26.7% report attorney meetings to support pro bono work. The respondents mention a wide variety of subjects that lend themselves to pro bono work, from the traditional work of domestic relations law, landlord-tenant law, and immigration law, to the less common criminal, legislative, and international pro bono work. To encourage senior attorneys to undertake pro bono work, at least one partner in charge of pro bono work recommends a personal approach. Approximately one-

third of firms that encourage senior attorneys to participate in pro bono work report that their firms partner with a public interest or pro bono organization to facilitate such work. The reliance of firms on such partnerships and our conversations with managing partners about Second Acts programs suggest that public interest organizations can play an important role in facilitating these programs, as they act as clearing-houses to the firms for appropriate public interest work.

![Table 5](image)

Finally, in the survey the Institute asked the respondents their opinions on the possible advantages and obstacles to Second Acts programs and whether they thought attorneys in their firms would be interested in pursuing such programs. The survey questions on these subjects asked the respondents to rate their responses in the following manner: positive 2 for "yes" or they "agree," a positive 1 for "maybe," 0 for "neutral," -1 for "probably not," and -2 for "no" or they "don't agree." The respondents found reason to agree with all of the argu-

ments previously raised in support of Second Acts programs, except that the respondents did not believe that such programs would significantly reduce retirement costs. As represented in Tables 6 and 7, on average, the respondents were most convinced that a Second Acts program would increase the firm's pro bono work (mean answer 1.44), with the majority of all respondents answering "yes" to the question regarding this issue. The respondents were next most convinced that a Second Acts program would be of use in providing training and mentoring opportunities within the firm (mean answer 1.02), with 26.8% of all respondents answering "yes" to the question regarding this issue and 58.5% responding "maybe."

The respondents, on average, somewhat agreed that a Second Acts program would be useful in encouraging continuity for clients (mean answer 0.39), with 12.5% of the respondents answering "yes" and 42.5% responding "maybe." On the whole, the respondents were not convinced that a Second Acts program would decrease retirement costs for firms (mean answer -0.44), with a majority of the respondents answering "no" or "probably not" when asked about this possible benefit of such a program. However, on average, the respondents were very positive when asked whether their senior attorneys might be interested in such a program (mean answer 0.8) and whether their firms might be interested in the program (mean answer 0.95). Of the more than forty firms that responded to these questions, 19.5% responded "yes" to whether they thought their senior attorneys would be interested in such a program, while 22.5% said they thought their firms would be interested. Only one respondent was sure that neither her firm's attorneys nor her firm would be interested in such a program.

In order to determine which factors increase a firm’s interest in a Second Acts program, the Institute conducted a simple linear regression analysis estimating firm interest as a function of several variables. Linear regression allows one to estimate the impact of various independent variables on a dependent variable, in this case interest in a Second Acts program, while holding the impact of the other independent variables constant. There are a variety of independent variables that might be thought to have an impact on firm interest in a Second Acts program. First, one might expect that the larger the firm the more interest it might have in a program because large firms would have the necessary resources and enjoy economies of scale in establishing a program. Second, it is reasonable to expect that the more attorneys a firm has approaching retirement, the more interested the firm would be in a Second Acts program. To account for this effect, in the analysis we include the percent of attorneys between the ages of fifty-five and sixty-four in each firm. Finally, if the firm has other programs that already address the challenges of transitioning attorneys into retirement, one might expect that the firm would be less interested in a Second Acts program. Accordingly, we include in our analysis data on whether the firm has a written retirement program, whether it already has a program to help transition senior attorneys into retirement, and whether the firm already has a program to encourage senior attorneys to undertake pro bono work. The results of the regression analysis are reported below as Regression 1.
As shown in Regression 1, the firms' interest in a Second Acts program is positively related to the number of attorneys in the firm and the percent of the firm's attorneys who are between fifty-five and sixty-four years old, and it is negatively related to whether the firm already has a written retirement program or a transition or pro bono program for senior attorneys. Although the impact of the number of attorneys in the firm on the firm's interest in a Second Acts program is positive and statistically significant, the actual impact of increased firm size on interest is relatively small. With a coefficient of 0.001277, firm size must increase by 760 attorneys in order to increase a given firm's interest by approximately one standard deviation, which is approximately thirty-four percentiles at the mean.\textsuperscript{54} The percentage of the firm's attorneys who are between fifty-five and sixty-four years old has a slightly larger impact on firm interest in Second Acts programs that is also statistically significant. With a coefficient of 0.054518, if the percent of a firm's attorneys who are near retirement age increased from 0% to 18%, that would increase firm interest in a Second Acts program by 0.97 or one standard deviation.\textsuperscript{55} A written retirement program or existing transition and senior pro bono programs give a firm some means of dealing with the large number of senior attorneys and decrease interest in Second Acts programs, although none of these effects are statistically significant. Having a written pension plan reduces a given firm's interest in a Second Acts program by 0.291611, which is about one-third of a standard deviation. The existence of a transition to retirement program or a pro bono program aimed at senior attorneys both have a slightly larger negative effect on firm interest, decreasing that interest by 0.455236 and 0.382476 respectively. All of these results make sense within the context of this article's analysis.

\textsuperscript{54} The mean firm interest in a Second Acts program is 0.95, with a standard deviation of 0.97. With a coefficient of 0.001277 for the number of attorneys, firm size would have to increase by 760 attorneys (0.97/0.001277) in order to increase firm interest by 0.97, which is one standard deviation. Assuming a standard normal distribution, if a firm at the mean were to increase its interest by one standard deviation, it would jump over approximately thirty-four percent of the other firms in the distribution in their interest in Second Acts programs.

\textsuperscript{55} With a coefficient of 0.054518 for the percent of attorneys near retirement, that percent would have to increase by 17.8 points (0.97/0.054518) in order to increase firm interest by 0.97, or one standard deviation.

**CONCLUSION**

The legal profession has a golden opportunity to do well by its members, itself, and society at large. The aging of the Baby Boom generation presents society with a large population of idealistic and talented lawyers who have succeeded in their careers and now have the opportunity to better themselves and the less fortunate by under-taking a "second act" in pro bono work before they retire. Not only will such work be personally fulfilling for the lawyers involved, but it will help meet fundamental needs in providing legal representation to all members of society. Moreover, these programs can provide real benefits for firms that construct Second Acts programs to encourage such work. Second Acts programs can help the firms ease senior attorneys into retirement while they provide continuity for clients, provide training and mentoring for young associates, and fulfill the firm’s professional responsibility to supply pro bono services. The survey shows that of the examined firms, 18.2% of the attorneys are fifty-five years old or older, and the firms are concerned with the problem of transitioning these attorneys to retirement. The survey also shows that the respondents generally believe that a Second Acts program will increase the firm’s pro bono hours, be useful in training and mentoring associates, and improve continuity for clients. Finally, the survey shows that the respondents generally believe that their senior attorneys and firms would be interested in participating in a Second Acts program. Firm interest is greater among larger firms and firms that have a high percentage of attorneys nearing retirement, while interest is lower among firms that already have retirement, transition, and senior pro bono programs that address the needs of senior lawyers. Public interest organizations can facilitate Second Acts programs and pro bono work by acting as clearing houses to the firms with respect to appropriate projects.
The idea of Second Acts programs to encourage senior attorneys to provide pro bono work as they transition into retirement is an idea whose time has come. In the words of the Robert Hunter Song "Dinosaur:"

It's strictly a temporary groove
Got a lot of love and not a lot to prove
And I know - well I know
that growing old with rock and roll
is the best a poor boy can do.56
