CLUELESS ON CLASSIFICATION: TOWARD REMOVING ARTIFICIAL LIMITS ON CHAPTER 11 CLAIM CLASSIFICATION

by

Bruce A. Markell*

I. INTRODUCTION

Confirming a plan of reorganization under chapter 11 of the Bankruptcy Code1 is daunting. A plan proponent2 must affirmatively demon-
strate that it has met all thirteen requirements for confirmation. This task is further complicated by two confirmation requirements which seem to duplicate each other. The first, found at section 1129(a)(8) of the Code, requires each class of the debtor's creditors to approve the plan. The second, section 1129(a)(10), requires the approval of at least one class of impaired, non-insider, creditors.

The possibility of cramdown provides the most likely explanation for the apparent duplication. Cramdown, a bankruptcy term of art, refers to confirmation which occurs even though the plan proponent has not obtained the assent of all creditor classes. To achieve cramdown, the proponent must meet all other confirmation requirements and the plan must be "fair and equitable" and not unfairly discriminatory as to the dissenting class. Section 1129(a)(10) applies in cramdown; even though the plan proponent has not obtained the consent of all classes, it must obtain the consent of at least one impaired non-insider class.

Central to this analysis is the concept of a "class" of claims or interests. Classes vote. An impaired class must accept. Only dissenting classes in a cramdown receive the benefit of the fair and equitable and no unfair discrimination rules.

How are classes defined? This article addresses that question from both a historical and an analytical perspective. The article then examines

---

2 Although often the person attempting to confirm a plan will be the pre-petition debtor, the Bankruptcy Code specifically allows other entities to propose a plan. 11 U.S.C. § 1121(c) (1988) (allowing "[a]ny party in interest" to file a plan so long as exclusivity has terminated).

the existing reorganization provisions that bear on claim classification and the court opinions that explore these provisions. Too often, these opinions use terms such as "gerrymandering," or "artificial" impairment as emotional support for disallowing certain forms of classification. This article proposes that the current state of the law (at least the majority of it) is presently wrong and continuing to head in the wrong direction.

To replace the current tests and standards, I offer the following as a proposed construction of section 1122, the section of the Code governing classification: courts should permit any classification proposed by a chapter 11 plan unless a dissenter can establish that the challenged classification would combine, to the dissenter's detriment, creditors or shareholders with different non-bankruptcy liquidation priorities. A dissenter can establish detriment if the plan would transfer property or value preserved by the reorganization from the class in which the dissenter has been placed to another class having a different non-bankruptcy liquidation priority. Although somewhat cumbersome, this formulation essentially means that any classification is proper so long as it does not combine claims that have different non-bankruptcy priorities, such as mixing secured and unsecured claims in one class.

This test attempts to honor the structure and history of plan confirmation. It preserves the balance of negotiating power anticipated by the Code and its system of confirmation, giving effect to the compromises inherent in the Code enactment in 1978. In so doing, it seeks to prevent the involuntary transfer of any portion of the going concern surplus among non-consenting classes having different non-bankruptcy liquidation priorities.

The test is also fairly mechanical in application; that is, it looks only at the effect of a proposed classification, not at its motive. This limitation is intentional. The Code already provides subjective tests of the parties' motivations — there must be good faith in voting and in proposing the plan. On the other hand, the text of section 1122, as well as the text of
sections 1124 and 1129(a)(10), says nothing about the subjective motivations of the parties. It looks only to the effect of the proposed plan on a creditor’s claim.\(^\text{11}\)

Similar to section 1122, the proposed test says nothing about what claims a plan must classify together. One controversial consequence of this test is that it expressly validates classes regardless of the motive for creating them, and thus essentially gives the plan proponent free reign in classification. I defend this and other consequences of the test through an analysis of the history of classification, the Supreme Court’s current views on statutory interpretation, the Bankruptcy Code, and the policy considerations contained in the current Code. In conclusion, the paper illustrates the application of this standard in common chapter 11 situations.

II. WHY CLASSIFY CLAIMS?

To answer the question posed by the section heading, begin by examining the typical business debtor. It has substantial assets, has given someone a security interest in some or all of these assets, owes taxes and wages, and has a fair amount of unsecured trade credit. Add to this mix an inability to pay all of its debts as they become due. With some form of debt relief, however, this debtor will continue and be worth more than if it is liquidated.

If we really believe that the business is worth more together than apart,\(^\text{12}\) a key issue will be choosing the best form of debt relief to pre-

\(^{12}\) This is a fundamental assumption in reorganizations. As stated in the legislative history of the Code:

The purpose of a business reorganization case, unlike a liquidation case, is to restructure a business’s finances so that it may continue to operate, provide its employees with jobs, pay its creditors, and produce a return for its stockholders. The premise of a business reorganization is that assets are used for production in the industry for which they were designed are more valuable than those same assets sold for scrap. Often, the return on assets that a business can produce is inadequate to compensate those who have invested in the business. Cash flow problems may develop, and require creditors of the business, both trade creditors and long-term lenders, to wait for payment of their claims. If the business can extend or reduce its debts, it often can be returned to a viable state. It is more economically efficient to reorganize than to liquidate, because it preserves jobs and assets.

The Supreme Court has also spoken, in passing, about the purpose of chapter 11. See, e.g., NLRB v. Bildisco & Bildisco, 465 U.S. 513, 528 (1984) (“The fundamental purpose of reorganization is to prevent a debtor from going into liquidation, with an attendant loss of jobs and possible misuse of economic resources.”); United States v. Whiting Pools, Inc., 462 U.S. 198, 203 (1983) (“By permitting reorganization, Congress anticipated that the business would continue to provide jobs, to satisfy creditors’ claims, and to produce a return for its owners. . . . Congress presumed that the assets
serve that value. A system could be developed where a government agent, such as a paid administrator or a standing trustee, selects the form of reorganization. Some commentators argue that the present chapter 11 is closer to this system than we care to admit, but presently that is not what we have. Under chapter 11, the participants or some subset of them help to select the form of reorganization. Confirmation cannot occur unless every impaired class has the opportunity to accept or reject the proposed reorganization plan.

A. The History of Classification

Creditors did not always vote in the manner that they do today. Current reorganization statutes are a mosaic of two distinct lines of reorganization thought. The first, which I call the "democracy" or "creditor-centered" approach, minimized the involvement of a court. It gave effect to the decision of a pre-defined number or percentage of creditors as to the form and extent of debt relief. The second, which I call the "administrative" or "creditor-protective" approach, integrated a court or an administrative agency into the process of determining whether a particular form of debt relief was proper.

1. Compositions and Arrangements

The creditor-centered approach finds its origins in the way the common law treated the composition of creditors. Under common law, a debtor in financial difficulty would enter into a master contract with most or all of its creditors for debt relief. These contracts, known as composit-
tion agreements, could modify maturity dates, interest rates, or other terms of the debt owed. Creditors who did not sign the composition agreement were not affected by the sacrifices contained in the document. This flowed from the common law notion that an entity was not bound unless it assented to the change.

Starting in 1874, federal legislation attempted to foster compositions by providing that, if certain procedural requirements were met, a less than unanimous composition could be confirmed by a bankruptcy court. Its terms would then become binding on all creditors, even those who did not agree with the composition. The 1874 legislation, which had its roots in English and Scottish law, bound dissenting creditors if two

---

16 Id. When Congress altered this rule in 1874, see infra note 17, at least one court believed Congress’ change was in derogation of the common law right of unanimity, and thus strictly construed the provisions of the 1874 legislation. In re Shields, 21 F. Cas. 1308, 1309 (D. Iowa 1877) (No. 12,284).
18 Id.
19 The Bankruptcy Act of 1869, 32 & 33 Vict., ch. 71, § 126 (Eng.) [hereinafter “1869 Act”]. This section allowed for a court-approved composition as an alternative to bankruptcy. The alternative was attractive since unanimity of creditor approval was not necessary. Instead, any composition approved by a majority in number, and 75% in value, of creditors at a duly convened meeting would bind dissenting creditors. Id.

In calculating approval, creditors holding debts of ten pounds or less counted for the value requirement only, but not for the numerosity requirement. Id. Although this section permitted secured creditors to vote at the general meetings, another section limited their vote by stating that “[a] secured creditor [was] for the purposes of voting, . . . deemed to be a creditor only in respect of the balance (if any) due to him after deducting the value of his security.” Id. at § 16(4).

The 1869 Act simply carried forward the innovations incorporated in the English Bankruptcy Act of 1861. Act of 1861, 24 & 25 Vict., ch. 134 (1861) (Eng.) (Amending law relating to bankruptcy in England) [hereinafter “1861 Act”]. Under this Act, compositions were also binding on all creditors if agreed to by a majority in number of creditors holding 75% of the amount of claims. Id. at §§ 187 and 192. When calculating the number and amount voting, the Act excluded the claims of creditors who owed less than ten pounds. Id. at § 192(1) and (5).

After passage of the 1861 Act, Parliament appointed a committee to investigate the implementation of the Act. The committee heard testimony from both Scotland and Ireland on the required level of creditor assent. See 1861 English Report, supra note 12, at 112-13 (statement of Mr. James Wylie Guild, Scottish accountant and testimony of Mr. Henry Oldham, Irish solicitor). The committee also heard testimony on the effectiveness of, and satisfaction with, the composition provisions of the 1861 Act. Id. at 84-85 & 185 (testimony of Mr. Federic John Reed, English solicitor and testimony of Mr. Darnton Lupton, President of the Leeds). Given the continuance of the majority in number and 75% in value requirement, it appears that local satisfaction with the composition provisions prevailed.

Earlier English law provided for a variety of compositions, each of which, however, required a cessio bonorum; that is, a bankrupt is required to “turn over all his property to his creditors, in order to make the composition valid in case there were dissenting creditors.” Wm. Miller Collier, The
requirements were met: first, approval by a majority of creditors, holding three-quarters of the debt owed, who were present at a duly convened meeting of creditors, and second, written confirmation of the earlier approval by at least two-thirds of all the debtor's creditors who themselves held at least a majority of the debt owed by the debtor.\(^{21}\)

In making these calculations, all creditors holding claims less than fifty dollars and secured creditors holding deficiency claims were not considered when determining whether the necessary number of creditors agreed. The debts of both classes, however, were counted when determin-

**Law of Bankruptcy and the National Bankruptcy Act of 1898 115-16 (1899); Act of 1824, 6 Geo 4, ch. 16, § 133 (1824) (Eng.) (providing for binding composition if 90% of the creditors actually voting, who held claims in excess of twenty pounds, agreed to composition); Act of 1849, 12 & 13 Vict., ch. 106, § 215-16 (1849) (Eng.) (providing for binding public arrangement if consented to by 60% of creditors, in number and value, holding proved debts of ten pounds or more); 1861 Act § 224 (providing for binding private composition if agreed to by 6/7 of all creditors holding debts of ten pounds or more); 1861 Act § 230-31 (providing for binding composition after adjudication of bankruptcy if agreed to by 90% of the voting creditors, holding claims in excess of twenty pounds). The 1861 legislation did away with the requirement that the debtor turn over all of his or her property, and the 1869 legislation kept this change. See Collier, *supra.*

20 Bankruptcy (Scotland) Act of 1856, 19 & 20 Vict., ch. 79 (1856) (Eng.). Under this Act, a majority of creditors holding at least 80% in value could "sist," or stay, the bankruptcy proceedings, for a maximum of two months, in order to effect an arrangement. *Id.* at § 35. If during that time 80% of the creditors holding 80% of the claims agreed, they could force the terms of a composition on unwilling minorities. *Id.* at § 38. The debtor could also offer a composition at the meeting for the election of trustee or at the meeting held after his examination. *Id.* at § 139. The debtor’s offer of composition must receive an affirmative approval of 90% of all creditors. *Id.* at §§ 137-38. In any case, the debtor received a discharge from all debts subject to a surrender of all property to the jurisdiction of the "Lord Ordinary," that is, the equity judge, or sheriff. *Id.* at § 140.

21 1874 Act § 17. The actual threshold amounts for approval were initially taken from the 1869 British Act, but were the subject of open negotiation between the House and Senate. 2 *Cong. Rec.* 1143, 1268 (1874) (statement of Sen. Edmunds). The House, it seems, wanted a simple majority. *Id.* at 5061. The Senate, spurred by letters from business leagues, however, saw the matter as "a business question" and held to higher percentage requirements. *Id.* at 1268 & 5066. As explained by Senator Edmunds:

I believe that this is substantially in accordance with the English act of composition, though I think [the second vote] in the English law requires only a half of each; but as we have made the earlier part of the composition a little more favorable to the creditors than the English law did in some respects, I think it right, as this discharges a debt due to a man against his consent by a proposition to give time instead of winding up the estate, that it should take a little greater number of people to consent to it than is provided for in the English law under the other circumstances. *Id.* at 1352.

Collier also traced the 1874 legislation to § 126 of the 1869 English legislation. See Collier, *supra* note 19, at 115. See also 2 *Cong. Rec.* 1143, 1352 (1874) (statement of Sen. Edmunds); *In re* Scott, Collins & Co., 21 F. Cas. 805, 806-10 (E.D. Mo. 1876) (No. 12,519) (comparing similar provisions of 1874 American Act with 1869 British Act).
ing whether there was sufficient amount of debt in agreement.\textsuperscript{22} Fully secured creditors were not counted at all, unless they "relinquish[ed their security]" for the benefit of the estate.\textsuperscript{23}

The 1874 legislation had a short life, being repealed in 1878.\textsuperscript{24} Starting with section 12 of the 1898 Act, however, compositions became an integral part of federal bankruptcy legislation.\textsuperscript{25} Section 12 of that Act carried forward the notion of the composition,\textsuperscript{26} but for reasons that are not clear, lowered the threshold of assent to simply a majority in number and amount of the creditors.\textsuperscript{27} The 1898 Act also added explicit requirements that the court find the composition to be in the "best interests of creditors" and that it was proposed in "good faith."\textsuperscript{28}

\textsuperscript{22} 1874 Act § 17.
\textsuperscript{23} Id.
\textsuperscript{24} Act of June 7, 1878, ch. 160.
\textsuperscript{25} Bankruptcy Act of 1898, ch. 541, 30 Stat. 544, § 12 (repealed 1934) [hereinafter the "Bankruptcy Act"]). In the interim, Massachusetts enacted a law specifically providing for an insolvency discharge through the composition format. 1884 Mass. Acts, ch. 195-99, as amended by 1885 Mass. Acts, ch. 811-12, 1889 Mass. Acts, ch. 1090-91, 1890 Mass. Acts, ch. 350-51, 1897 Mass. Acts, ch. 216-18. Under this law, a majority in number and value of "general creditors," whose claims had been proved, was necessary to confirm a composition if it returned at least 50% to creditors; a 75% vote was required if the return to creditors was less than 50 cents on the dollar. 1885 Mass. Acts, ch. 811-12. In all cases, priority claims did not count for either the numerosity or the value requirement, and claims less than $50 did not count for the numerosity requirement. Bankruptcy Act § 2.

\textsuperscript{26} Bankruptcy Act § 12. These provisions resembled the 1874 provisions, but differed in that while the 1874 legislation permitted a composition either before or after adjudication of bankruptcy, the original 1898 Act only allowed a composition after the debtor had been adjudicated a bankrupt. The 1910 amendments to the 1898 Act changed this so that a debtor could propose a composition before, as well as after, adjudication as a bankrupt. Act of June 25, 1910, Pub. L. No. 61-294, ch. 412, 36 Stat. 838.

\textsuperscript{27} During the debates on the 1898 Act, the following response was given as to why the threshold was not left at two-thirds:

> You might just as well say, 'Why not leave it to seven-eights or nine-tenths?' A majority seems to be the rule of life in such matters. The only intent of this was to get an absolute settlement . . . . [\textsuperscript{[28]}] And we have further protection by providing that if within six months after the adjudication has been made it is shown that fraud was perpetrated, the composition can be reopened . . . ."

\textsuperscript{28} CONG. REC. 4540 (1896) (statement of Rep. Henderson) (emphasis added). Indeed, it appeared many viewed the composition provisions, with their lower standards of acceptance, as a palliative to the provisions of the bill which made it easier to file an involuntary proceeding. 30 CONG. REC. 602 & 629 (1897) (statements of Sen. Lindsay and Sen. Hoar).

\textsuperscript{29} Bankruptcy Act § 12d. These additions were designed to allow creditors to "pass upon the honesty of a debtor and to calculate the worth of their claims." 25 CONG. REC. 2783 (1893) (remarks
Chapter XI, enacted in 1938, began as an amendment to section 12.\textsuperscript{29} Chapter XI expanded the requirements of a composition, but continued the notion of a majority in number and amount as the necessary threshold for binding minorities.\textsuperscript{30} This legislation also explicitly provided for segmentation of unsecured claims, the only claims which chapter XI purported to effect, into different classes.\textsuperscript{31}

2. Equity Receiverships and Chapter X

As was the case with section 12 compositions, chapter XI had several drawbacks. The rights of secured creditors\textsuperscript{32} and the interests of equity holders could not be affected absent the unanimous consent of those involved.\textsuperscript{33} When the major railroads and other large companies of the day needed reorganization, however, they had to deal with diverse groups of secured creditors and equity holders.\textsuperscript{34}

\textsuperscript{29} 1A COLLIER ON BANKRUPTCY ¶ 12.01, at 1231 (14th ed. 1978). The move to amend § 12 was sponsored by various associations representing creditors. SEC v. United States Realty & Imp. Co., 310 U.S. 434, 450 n.8 (1940).

\textsuperscript{30} 11 U.S.C. § 762(1) (original version at July 1, 1898, ch. 541, as amended by § 362(1), June 22, 1938, ch. 575, 52 Stat. 911) (repealed 1979)).

\textsuperscript{31} 11 U.S.C. § 757(1) (original version at July 1, 1898, ch. 541, as amended by § 357(1), June 22, 1938, ch. 575, 52 Stat. 840) (repealed 1979)).

When Congress was reforming the bankruptcy laws in the 1930s, the House of Representatives had passed a bill which provided for non-consensual compositions if its terms were fair. This was ultimately rejected by the Senate, and the 1933 revision to § 12 (moving it to § 74) did not change the majority approval provision. See S. REP. NO. 1215, 72d Cong., 2d Sess. 3-4 (1933) (stating that if a majority of creditors would not accept a proposed composition, then "[i]t is not believed to be a practical thing to impose this duty [of involuntarily adjusting debts] upon a referee in bankruptcy, a Federal judge, or any other human being, for that matter. No person ought to be compelled to sit in judgment upon the application of a debtor to protect him and his property from creditors who are insisting that the money due them be promptly paid.").

\textsuperscript{32} An early edition of COLLIER indicated that "[s]ecured claims will be counted [in a § 12 composition] only to the amount unsecured; they can be 'allowed' only to such amount." 1 COLLIER ON BANKRUPTCY § 12 IV(e)(3), at 319 (12th ed. 1921). The treatise goes on to state that "[m]ortgagees whose debts are dependent solely upon the contingency of a deficiency arising upon foreclosure are neither necessary nor proper parties to a proposed composition." Id.

\textsuperscript{33} As a consequence, in 1938, Congress made explicit what had been implicit under § 12: that arrangements were only for the adjustment of the rights of unsecured creditors. 11 U.S.C. §§ 706(1), 707 (repealed 1979). For a general overview of the weaknesses of compositions as applied to large corporations, see 6 COLLIER ON BANKRUPTCY ¶ 7.41, at 1334-35 (14th ed. 1978).

\textsuperscript{34} As stated in the legislative history of § 77:

These [composition] provisions, as now drawn, are obviously unavailable for the adjustment of the claims of creditors and security holders involved in the reorganization of a large corporation, not because the principle of composition is inapplicable to such cases but merely because the statute is not drawn to meet the complexities of the situations
Before 1933, equity receiverships were the primary vehicle used to reorganize these entities.\(^5\) In these cases, courts adopted a more creditor-protective point of view. They independently scrutinized the fairness of the proposed plan of reorganization and only allowed voting after they determined that the reorganization's terms were fair.

After 1933, railroad reorganizations proceeded under section 77,\(^8\) while reorganizations for other corporate entities proceeded under section 77B\(^7\) (before 1938) or chapter X (until 1979).\(^3\) Each of these provisions chose an affirmative "two-thirds in amount of claims or interests" to approve a plan.\(^3\)

These reorganizations were also more creditor-protective. Under these systems, an affirmative vote of the creditor body was not sufficient to confirm a good faith plan. Following the lead of equity receiverships, the plan proponent had to comply with the absolute priority rule for every creditor.\(^4\) Moreover, since the reorganization could affect more than just unsecured creditors, questions arose regarding how to organize the participants by class, and what each classification could do.

Some of these questions were handled by legislation. Both section 77B and chapter X required the court to divide creditors and stockholders into classes according to their interests.\(^4\) With respect to a lender’s deficiency claim, section 77B permitted, but did not mandate, the court to "classify as an unsecured claim, the amount of any secured claim in excess of the value of the security therefor . . . ."\(^4\) Chapter X was more specific; it stated that the court “shall . . . determine summarily the value of the security and classify as unsecured the amount in excess of such value.”\(^4\)

Claims which were paid in full or which were not affected, were not presented.

S. REP. NO. 1215, 72d Cong., 2d Sess. 17 (1933).

\(^5\) Bruce A. Markell, Owners, Auctions, and Absolute Priority in Bankruptcy Reorganizations, 44 STAN. L. REV. 69, 75 (1991) [hereinafter Markell, Owners, Auctions].

\(^6\) Act of March 3, 1933, ch. 204, § 77, 47 Stat. 1467, 1474.

\(^10\) Markell, Owners, Auctions, supra note 35, at 84-85.

placed in a class and thus did not vote on the reorganization. Finally, Congress believed that claims having different liquidation priorities should be placed in different classes.

These reorganizations adopted a more administrative approach. As an initial matter, chapter X required a higher level of class acceptance. Acceptance occurred only with the approval of "two-thirds in amount of the claims filed and allowed of each class." In addition, under the absolute priority rule, reorganizations could not be confirmed unless each senior claimant received its full share of reorganization value before any junior claimant could retain an interest in the reorganized entity. Chapter XI, at least after 1952, contained no such provision. Chapter X also required the automatic appointment of an independent trustee to run the business until it reorganized, if the indebtedness was $250,000 or more. In chapter XI, the debtor remained in possession unless a party in interest sought the appointment of a trustee or receiver. Finally, chapter X required a higher percentage of creditor approval before minorities were bound. Chapter X required an affirmative vote from creditors holding two-thirds of the amount of debt affected, while chapter XI continued the majority in number and amount from the earlier composition

---

44 Act of June 7, 1934, ch. 424, § 77B(b)(5), 48 Stat. 911, 914. For chapter X, see Collier, supra note 33, at 1338.
46 Bankruptcy Act § 179, 11 U.S.C. § 579 (repealed 1979). Chapter XII, which applied to non-corporate real estate reorganizations, also enabled debtors to modify the rights of creditors holding different liquidation priorities, including mortgage holders and unsecured creditors. Id. at §§ 406-526. This chapter also required a two-thirds vote of each affected class for confirmation. Id. at § 468(1). The differences are explored in Rusch, Gerrymandering and Classification, supra note 7, at 189-92.
3. The Mosaic

Congress attempted to fuse these two strands of reorganization in 1978. With the adoption of the Code, Congress created one form of reorganization instead of several. This new form of reorganization, titled chapter 11, resembled a mosaic of previous practice. Congress chose chapter X's full scope of relief, but retained chapter XI's concept of a debtor in possession. Exclusivity from chapter XI also remained, but in combination with a modified version of chapter X's absolute priority rule.

Classification presented a different issue. One Code innovation was the modification of chapter X's absolute priority rule. It continued as the baseline for non-consensual reorganizations, but with a twist. Absolute priority rights were no longer creditor specific—they could now be altered by class vote. Congress combined the chapter X and chapter XI rules to govern this class vote. The result was similar to the solution proposed in 1874: both a numerosity requirement and an amount of debt requirement. Chapter XI provided the numerosity, more than one-half of the claims voting; chapter X provided the amount, at least two-thirds in amount of the debt voting.

This may be interesting history, but what relevance does the previous history have on the interpretation of current section 1122? If nothing else, the history of classification constitutes the history of the effort to construct classes so as to enable them to vote on debt relief. Behind the assumption

---

A class of claims has accepted a plan if such plan has been accepted by creditors, other than any entity designated under subsection (e) of this section, that hold at least two-thirds in amount and more than one-half in number of the allowed claims of such class held by creditors, other than any entity designated under subsection (e) of this section, that have accepted or rejected such plan.

With respect to classes of equity interests, the standard is approval of class members actually voting and who hold “at least two-thirds in amount of the allowed interests of such class . . . .” Id. at § 1126(d).

58 In constructing consent mechanisms for plan confirmation, other questions might arise. For example, is being owed money both a necessary and a sufficient qualification for participating? Section 1165, as did its predecessor § 77 of the Act, provides that in connection with railroad reorganizations, a court is to "consider the public interest in addition to the interests of the debtor, creditors, and
that voting is meaningful lies the notion that some common interest exists among the members of a class. Otherwise, it makes little sense to say that anything less than a unanimous vote could bind dissenters.

The search for commonality among creditors starts with the proposition that all creditors are alike. The 1874 Bankruptcy Act, for example, simply referred to "all the creditors of the debtor." From this grouping, however, the 1874 Act excluded creditors to the extent they were fully secured. The 1884 Massachusetts Act excluded creditors with priority. The 1898 Bankruptcy Act did not allow compositions or arrangements under chapter XI to affect secured claims or equity interests.

It is not until the enactment of section 77B in 1934 that distinctions were also drawn among claimholders sharing the same non-bankruptcy liquidation priority. Section 77B distinguished between separate deficiency claims and regular unsecured claims, between unsecured claims which would have had priority in equity receiverships, and those that would not, and between and among various classes of equity securities.

Bankruptcy law has come a long way from the simple model of secured, unsecured, and equity classes that supported the 1874 legislation. Apart from the rising number of priorities among unsecured creditors, modern financial wizards debate hybrid instruments such as debt which is convertible into or payable in common stock, or common stock which is puttable for cash. State and federal law contain numerous priorities within the general class of unsecured claims. The evolution of classifica-

---

Bankruptcy Act § 12.

See supra notes 37-44 and accompanying text.

tion appears to follow the evolving complexity of financial life.

If any generality can be drawn from the history of classification, it seems to be this: before 1978, classification under the creditor-protective model prevalent in equity receiverships and chapter X of the 1898 Act was synonymous with non-bankruptcy liquidation priorities. The higher two-thirds requirement for voting reflected a concern for more consensus among creditors given the wider range of possible relief.

Under the democratic model used in compositions and chapter XI, however, a lower level of approval, the simple majority, reflected an assumption that liquidation priorities were not at risk. It also reflected the view that the proper form of consideration could be the subject of reasoned debate, and that the way to expedite arrangements was to lower the consent requirement. This lowering of the threshold for approval effectively took away the veto power that large claims, or large groups of claims, could have.

In other words, and with somewhat more abstraction, pre-Code classification of claims in compositions and arrangements arose as a device to allocate value within a group. Further, since all members of that group shared the same liquidation priority, all members had essentially the same motives with respect to the continuation of the debtor because that decision increased or decreased the return on their claims. In short, voting in classes provided a method of allocating the going concern surplus value within that group.

This abstraction also applied to reorganizations under equity receiverships and chapter X. The ability, however, to implement a far wider range of relief, which in some cases was involuntary, was thought to justify a higher threshold of approval and more ability to create different classes. In addition, the applicability of the absolute priority rule to these reorganizations acted to ensure that there was no non-consensual spillover of going concern surplus from one group to the next.

Under both regimes, dissenting minorities had other means of protecting their interests. Until the Code's adoption, for example, each creditor in a chapter XI proceeding could invoke the best interests test. This test ensured that each creditor received an amount equal to its liquidation entitlement. Each creditor in chapter X had the protection of the absolute priority rule. Due to the absolute priority rule in chapter X and the limited relief in chapter XI, classification did not greatly concern un-

67 See Markell, Owners, Auctions, supra note 35, at 83-90.
secured creditors; in theory, before equity could continue to participate in any significant reorganization, it had to ensure that each creditor was paid in full. Although classes could vote on the allocation of value, the vote did not extend to a waiver of priority. Any creditor could object to confirmation based on equity retaining an interest, even if that creditor was a member of a class that voted in favor of the plan. This system changed in 1978. Although the Code adopted chapter XI's best interests test for each creditor, it allowed classes to waive what before had been individual absolute priority rights. This added to the stakes. Classification was no longer a by-word for liquidation priority. Instead, it became a device that could actually alter liquidation priorities. Put another way, classification no longer dealt primarily with allocation of value within a class; it became a device for allocation of value within and among classes holding different liquidation priorities. The Code thus made individual absolute priority rights subordinate, in many cases, to a majority determination that the debtor should be reorganized.

B. The Current Rule on Classification

The words chosen by Congress to accomplish this major change were both important and relatively banal. Section 1122(a) states that:

[A] plan may place a claim or an interest in a particular class only if such claim or interest is substantially similar to the other claims or interests of such class.

Thus, section 1122(a) states a rule of inclusion. It tells us when a plan proponent may place two or more participants in the same class. This follows the historic use of classification as a means of separating creditors with different liquidation priorities and reiterates the legislative history that states that the statute "codifies current case law." Although Con-

69 See Markell, Owners, Auctions, supra note 35, at 88.
70 The legislative history of § 1122 is reviewed in Rusch, Gerrymandering and Classification, supra note 7, at 183-86.
gress imported the higher acceptance requirements from chapter X, it kept chapter XI’s flexibility in sorting classes within the same non-bankruptcy liquidation priority.

Stating the rule, however, tells only part of the story. What section 1122(a) does not explain is when substantially similar claims may be classified separately. In some respects, this omission is not surprising. Since absolute priority could not be waived by a class prior to 1978, classification had a different function: tracking and confirming liquidation priorities. The modifications, however, made in 1978, and to some extent in 1984, would change how classification was used.

III. COURTS, CLASSIFICATION, AND GERRYMANDERING

A. Restating the Obvious: Why Classification is Important

Classification allows a plan proponent to rewrite non-bankruptcy priorities within the bankruptcy priority scheme. Since a plan accepted by all classes can be confirmed even if it violates absolute priority, this ability to mold classes is powerful. Initially, a plan proponent has the opportunity, under the right circumstances, to overwhelm objecting parties by including them in a class filled with sympathetic creditors. Unlike previous bankruptcy practice, dissenting creditors cannot assert violations of absolute priority if the class in which they belong, or have been placed, votes in favor of the plan.

This inability to complain highlights a concept worth some elaboration. Classification does not exist in a vacuum. There must be a plan containing the classification. The ultimate question is not whether a plan contains classification which is permissible, for bad classification presumably can be waived, but whether the plan can be confirmed. Thus, looking at classification without also looking at the plan that contains the classifi-

9.02[1], at 9-8.

78 Many courts recognize this. See, e.g., John Hancock Life Ins. Co. v. Route 37 Business Park Assoc. (In re Route 37 Business Park Assoc.), 987 F.2d 154, 158 (3d Cir. 1993) (“Section 1122(a) does not expressly provide that ‘substantially similar’ claims may not be placed in separate classes.”); Hanson v. First Bank of South Dakota (In re Hanson), 828 F.2d 1310, 1313 (8th Cir. 1987) (“We agree that 11 U.S.C. § 1122(a) does not prohibit the placement of substantially similar claims in different classes.”); In re Jersey City Medical Ctr., 817 F.2d 1055, 1060-61 (3d Cir. 1987) (“The express language of this statute explicitly forbids a plan from placing dissimilar claims in the same class; it does not, though, address the presence of similar claims in different classes. . . . We agree with the general view which permits the grouping of similar claims in different classes.”); Teamsters Nat’l Freight Indus. Negotiating Comm. v. United States Truck Co. (In re United States Truck Co.), 800 F.2d 581, 584-86 (6th Cir. 1986) (confirming a chapter 11 plan in an operating case which classified union claims separately from other general unsecured claims).
cation provides only a small part of the story.

Plan proponents often structure their classes to ensure confirmation of the plan. Even if no class consented to the proposed plan, the original text of the Code permitted confirmation so long as the plan itself was “fair and equitable” and did not “unfairly discriminate” against non-consenting classes.74

B. Section 1129(a)(10) and “Real” Classes of Creditors

This remained the state of the law until 1984 when Congress adopted the Bankruptcy Amendments and Federal Judgeship Act of 1984 (BAFJA).75 As part of BAFJA, Congress added section 1129(a)(10).76 This section provides that, even in cramdown, at least one impaired class of non-insider creditors must accept the plan. This provision requires some independent validation of the plan; insiders are not counted when determining whether this confirmation requirement is met.77

Section 1129(a)(10) thus introduced novel considerations into the strategy of claim classification. Rather than attempting to use classification to overwhelm dissenters, plan proponents began to use it to isolate support. The prototypical situation is that of the real estate debtor with an undersecured creditor. In that situation, the amount of the deficiency claim usually dwarfs all other debts. Therefore, unless separate classification is possible, no plan can be confirmed without the secured creditor’s approval.78

---

74 Until 1984, it was theoretically possible to confirm a plan without the consent of any class of impaired creditors. This followed the disputed proposition that chapter XII had sanctioned such results. See Rusch, Gerrymandering and Classification, supra note 7, at 190-91; 9 COLLIER ON BANKRUPTCY ¶ 8.12, at 1080 (14th ed. 1978).

76 11 U.S.C. § 1129(a)(10) (1988). Professor Rusch reviews the legislative history of § 1129(a)(10) in Rusch, Gerrymandering and Classification, supra note 7, at 186-89. See also Carlson, supra note 7, at 577-82.

77 See S. REP. No. 65, 98th Cong., 1st Sess. 85 (1983) (“Paragraph (10) makes clear the intent of § 1129(a)(10) that one ‘real’ class of creditors must vote for the plan of reorganization.”). See also S. REP. No. 150, 97th Cong., 1st Sess. 16 (1981).

C. Classification and the Courts

Since 1984, courts have read section 1122 through the lens of section 1129(a)(10). They often examine a plan proponent’s motives in separately classifying claims, and if that classification serves only to provide a consenting class, the classification is struck down before confirmation. Use of terms such as "gerrymandering" and "artificial impairment" are liberally sprinkled through these opinions.\footnote{The definitive origins of gerrymandering are set forth in Carlson, \textit{supra} note 7, at 565-66.}

While these cases may reach the result anticipated by the Code, they do so for the wrong reason. This can be seen from a short examination of cases construing section 1122, which break into roughly two groups: real estate cases which involve single-asset debtors and those which do not. The single-asset debtors, or SADs,\footnote{See, e.g., Boston Post Rd. Ltd. Partnership v. FDIC (\textit{In re Boston Post Rd. Ltd. Partnership}), 21 F.3d 477, 481 & 483 (2d Cir. 1994), \textit{cert. denied}, 63 U.S.L.W. 3192, 1994 Westlaw 512684 (U.S. Jan. 17, 1995) (No. 94-442); John Hancock Mutual Life Ins. Co. v. Route 37 Business Park Assocs., 987 F.2d 154, 158 (3d Cir. 1993); Phoenix Mut. Life Ins. Co. v. Greystone III Joint Venture (\textit{In re Greystone III Joint Venture}), 995 F.2d 1274, 1279 (5th Cir. 1991), \textit{cert. denied}, 113 S. Ct. 72 (1992) ("[T]hou shalt not classify similar claims differently in order to gerrymander an affirmative vote on a reorganization plan."); \textit{In re Bloomingdale Partners}, 1994 Westlaw 443684, 25 Bankr. Ct. Dec. 1544 (Bankr. N.D. Ill., Aug. 15, 1994); Meltzer, \textit{supra} note 7.} have generated the most litigation.\footnote{SADs are entities, usually partnerships, which own one asset, usually an apartment complex or other income producing real property. \textit{See} 11 U.S.C. § 101(51B) (definition of "single asset real estate"), \textit{added} by Bankruptcy Reform Act of 1994, Pub. L. No. 103-394, § 218, 108 Stat. 3146 (October 22, 1994). The combination of investment tax credits, depreciation, and various other non-cash charges to income with the pass-through nature of partnership taxation (not to mention government subsidy of the residential real estate market), make SADs an attractive investment opportunity. The roller-coaster nature of the real estate market, however, often converts these investment opportunities into bankruptcy problems.}\footnote{An excellent analysis of the problems caused by single-asset debtors is contained in Krause, \textit{supra} note 7.}

1. Of "SADs"—Single-Asset Debtors—And Other Real Estate Woes

In SAD reorganizations, every senior lender has a significant and credible strategy. It can propose a liquidation plan or a reorganization plan that is relatively easy to implement: sell the property and then distribute all proceeds in accordance with non-bankruptcy priorities. Even in the event of stalemate and dismissal, the lender still receives the same as it would under a liquidating plan.

Debtors (or, more accurately, debtors’ principals) then scramble to salvage their investment, employing everything from "new value" plans to plans containing harsh non-market terms. Without section 1129(a)(10),
they could respond with a competing cramdown plan, with the bankruptcy judge and section 1129(c) deciding the outcome. Section 1129(a)(10), however, requires them to find or carve out separate impaired classes to approve the plan.

What is the role of section 1122 in this scuffle? It only tells us when we cannot combine claims; it is silent as to when we may separate them. The natural reaction to this is to classify separately the lender’s deficiency claim, leaving all other unsecured creditors in a different class. There is nothing in the statute preventing this classification. Since the issue is one of separation rather than combination, the statute is silent. Presumably, this silence permits actions not expressly prohibited.

The situation is further complicated by those provisions of the Bankruptcy Code which alter non-bankruptcy priorities. In the real estate context in particular, chapter 11 converts non-recourse deficiencies, which take nothing outside of bankruptcy, into regular unsecured deficiency claims, which do take something inside bankruptcy. Thus, debtors have attempted to separately classify non-recourse deficiencies in order to create the elusive accepting impaired class from the remaining unsecured creditors.

Until recently, most of these attempts failed. The Second, Third, Fourth, Fifth, and Eighth Circuits have held such separate classification to be impermissible from among the remaining unsecured creditors. The Fifth Circuit stated its objection cleanly: “thou shalt not classify similar

---

83 Recall that § 77B and chapter X permitted, but did not mandate, that deficiency claims could be classified with other unsecured claims. Act of June 7, 1934, ch. 424, 48 Stat. 911, 915 (§ 77B) (repealed 1938); 11 U.S.C. § 597 (chapter X) (repealed 1979).

84 See Connecticut Nat’l Bank v. Germain, 112 S. Ct. 1146 (1992) (By not explicitly amending non-bankruptcy jurisdictional statutes to deny ability to appeal interlocutory orders from district court orders, Congress could not be held to preclude such appeals implicitly through enactment of a scheme specifically dealing with bankruptcy appeals and which precluded such jurisdiction).

86 For a compelling argument that separate classification is mandatory when the debtor’s general partner is sufficiently solvent to pay trade claims, see Carlson, supra note 7.

claims differently in order to gerrymander an affirmative vote on a reorganization plan.  

*John Hancock Mutual Life Insurance Co. v. Route 37 Business Park Associates* presents an illustrative analysis. In *John Hancock*, the debtor attempted to justify separate classification based on the different treatment of the non-recourse deficiency under state law. The court gave two basic responses, neither of which is entirely satisfactory. In rejecting separate classification, the court asserted that permitting separate classification would disenfranchise the non-recourse creditor. The court also noted that, regardless of the status under non-bankruptcy law, bankruptcy law equalizes the status on liquidation of unsecured claims and non-recourse deficiency claims.

As to the first point, only a myopic view of bankruptcy law would see the partially-secured creditor as disenfranchised. Initially, such a claim holder has, and will receive a full distribution in respect of, its secured claim. Receipt of this distribution would be the most that a creditor could expect under non-bankruptcy law or in a chapter 7 liquidation. Second, even if other creditors accept the plan, the plan proponent can confirm over the dissent of the separately segregated deficiency only if the treatment of that deficiency is "fair and equitable" and not unduly discriminatory. In short, no junior class can participate and no equal class can unfairly improve its claim. Finally, unless there are no other creditors—in which case dismissal for a lack of a good faith filing might be appropriate — lumping a large, bankruptcy-manufactured claim with unsecured creditors whose claims are not dependent on the chapter of the Code providing relief to the debtor, effectively disenfranchises the smaller creditors.

As to the second point, no one doubts that section 1111(b) stops the debtor from disallowing the deficiency portion of a non-recourse claim in chapter 11. The limits of this assertion, however, must be examined. First, as noted above, if the case is dismissed or converted to one under chapter 7, section 1111(b) does not apply. Section 502(b)(1) permits a

92 Id. at 161.

94 11 U.S.C. § 1111(b) (1988). If it were not for § 1111(b), § 502(b)(1) would allow estates to disallow any recovery on a deficiency arising in connection with a non-recourse claim.

95 A conversion may occur "for cause." 11 U.S.C. § 1112(b)(1) (1988). If the case is converted to
representative of the estate to disallow the creditor’s claim for a deficiency because non-bankruptcy law would not recognize it. Second, this limited life — only in chapter 11 is the deficiency claim recognized — is intentional and integral to the section 1111(b) election. The purpose of that election is to strike a balance between a non-recourse secured lender and the debtor. Although the secured creditor is saved from losing its deficiency claim due to the bankruptcy discharge, in return it must elect to have its entire claim treated as secured. In short, the secured lender gains secured treatment for the full amount of its debt, but loses the right to participate in the plan as an unsecured creditor.

Prohibiting separate classification for creditors who have not made the election — that is, who are willing to risk a discharge of the deficiency claim — gives the secured creditor more than Congress provided. The “more” is an effective veto over reorganization proceedings through control of at least two classes — the main secured class, and the class of unsecured creditors. I use the term “veto” because section 1129(a)(10) precludes the debtor from even proposing “fair and equitable” treatment of the separately classified deficiency. If Congress had wanted to eliminate all single-asset real estate cases from chapter 11, it could have elected to do so but it did not. The cases on separate classification, however, achieve by judicial interpretation what Congress did not say in the statute.

This view may change. The Seventh Circuit, after explicitly reviewing most of the circuit cases noted above, recently permitted separate classification of unsecured deficiency claims. Specifically, the Seventh Circuit stated that “we cannot accept the proposition implicit in Greystone

---

one under chapter 7, the effect is as if the original petition sought relief under chapter 7. 11 U.S.C. § 348(d) (1988).

98 Section 362(d)(3), added by § 218(b) of the Bankruptcy Reform Act of 1994, see supra note 81, purports to apply tougher standards to single asset real estate debtors. For example, it provides for faster and more focused relief from the stay. 11 U.S.C. § 362(d)(3) (1994). It exempts these new relief measures, however, in those cases in which “the debtor has filed a plan of reorganization that has a reasonable possibility of being confirmed within a reasonable time.” Id. at § 362(d)(3)(A). As stated in the legislative history, “[t]his amendment will ensure that the automatic stay provision is not abused, while giving the debtor the opportunity to create a workable plan of reorganization.” S. Rep. No. 168, 103d Cong., 1st Sess. 46 (1993).

that separate classification of a section 1111(b) claim is nearly conclusive evidence of a debtor’s intent to gerrymander an affirmative vote for confirmation.\textsuperscript{100}

The Seventh Circuit’s analysis focused on section 1129(a)(7), the so-called “best interests of creditors” test that requires that each creditor receive as much as it would receive in a chapter 7 liquidation.\textsuperscript{101} Non-recourse deficiencies, however, receive nothing in a chapter 7. Therefore, because section 1123(a)(4) requires the same treatment for each class member,\textsuperscript{102} requiring the debtor to classify a non-recourse deficiency claim with other unsecured claims effectively bootstraps a non-recourse lender’s minimum recovery to that of a regular unsecured creditor.

The following example illustrates this result. Suppose that a simplified debtor has three creditors, two of which are owed $100, and one of which is owed $102. The two owed $100 have full recourse against the debtor and are unsecured while the third holds a non-recourse claim secured by property now worth one dollar. Although the debtor’s business will liquidate for $201, it has a going concern value of $298. In a chapter 7 bankruptcy, the non-recourse lender would take one dollar, and the two full recourse creditors would each get $100. The debtor would take nothing.

If the parties wish to preserve the going concern surplus, the value in excess of $201, they will attempt to reorganize under chapter 11. This strategy, however, is problematic. If the holdings from \textit{Phoenix Mutual Life Insurance Co. v. Greystone III Joint Venture (In re Greystone III Joint Venture)},\textsuperscript{103} and \textit{John Hancock} are followed, then the non-recourse creditor’s $101 deficiency\textsuperscript{104} will have to be classified with the two recourse creditor claims. This creates a class of $301 of unsecured claims, and the non-recourse creditor gets its one dollar in security. Since section 1123(a)(4) requires all class members to be treated alike,\textsuperscript{105} each member will receive approximately ninety-nine dollars.\textsuperscript{106}

\textsuperscript{100} 19 F.3d at 318.
\textsuperscript{101} Id. at 319.
\textsuperscript{103} 995 F.2d 1274 (5th Cir. 1991), cert. denied, 113 S. Ct. 72 (1992).
\textsuperscript{104} Due to the disparity between the amount of the debt and the value of the collateral, I assume that the non-recourse creditor will not make the § 1111(b) election. It will thus have two claims in the reorganization: one secured claim in the amount of one dollar, and one unsecured claim in the amount of $101.
\textsuperscript{106} If all of the going concern surplus is allocated to creditors, the dividend is 98.67%. As a result, the recourse creditors will receive $98.67 in property in satisfaction of their claims, and the
The recourse creditors, however, will not accept the ninety-nine dollars because it is less than their liquidation dividend of $100. Thus, they could each block confirmation under section 1129(a)(7). On the other hand, if the non-recourse creditor does not receive at least ninety-nine dollars, it can block consensual confirmation since it holds more than one-third (101/301, or 33.55%) of the claims in the class.

This kind of dispute looks much more like an *inter-*class dispute than an *intra-*class concern.  Separate classification would better represent the bargaining position outside of chapter 11, since it would recognize the steeper downside to the obdurant lender.

Taking this situation into account, the Seventh Circuit further noted that section 1111(b) anticipates separate classification. In the case of a widely-held secured class, such as a class of secured, non-recourse, bondholders, section 1111(b) allows the class to choose whether it wants to be secured for the full amount of the debt or whether it wants to have a bifurcated claim. As a result, classifying regular unsecured creditors with the non-recourse deficiency claims gives unsecured creditors a vote on matters which either are irrelevant to them or which are none of their business.

2. *All Other Creditors*

What about other creditors — including secured creditors — whose deficiencies would be recognized under non-bankruptcy law? Obviously, this presents a different matter. Since such creditors must share in any value remaining after satisfaction of secured creditors, a different justification for separately classifying a deficiency claim must exist. The cases upholding separate classification of regular unsecured claims offer some guidance. The cases seem to embrace a notion that separate classification can occur if the segregated class has non-creditor motives.

---

*non-recourse creditor will receive $99.66, for a total allocation of $297.*

*There is an escape hatch. Section 1123(a)(4) allows a member of a class to elect to take "less favorable" treatment than that given to the rest of the class. This option, however, leads to an odd plan. It would offer $100 to each creditor with a side arrangement that the non-recourse creditor would take "less favorable" treatment. There are, however, problems with feasibility if the plan calls for payments of $300 when the going concern value is only $298.*

Johnston (In re Johnston), 21 F.3d 323, 327-28 (9th Cir. 1994) (proper to separately classify an unsecured claim which is being hotly disputed in separate litigation); Frito-Lay, Inc. v. LTV Steel Co. (In re Chateaugay Corp.), 10 F.3d 944, 956-57 (2d Cir. 1993) (finding separate classification of tax lessors based upon whether they independently provided debtor
For now, it is sufficient to say that differential classification of unsecured claims occurs frequently. I discuss later why such cases are common, but first I discuss the reasons why it is desirable to distinguish among such unsecured claims.

IV. A Proposal for Chapter 11 Classification

There are several practical justifications for differential classification. Creditors who have alternate forms of payment — such as third party guaranties — have different incentives with respect to their claims against the debtor. Also, creditors who view the debtor as a valuable vendor or customer have more of an interest in the continuation of the debtor than do one-time tort victims of the debtor. Chapters XI and XII of the Bankruptcy Act recognized these distinctions, permitting "division of [unsecured] debts into classes and the treatment thereof in different ways or upon different terms."

As Jeffrey Krause has noted, the taint of SADs has infected and called into question this practical knowledge. In order to return classification to its proper role, I suggest the following construction of section 1122, the section of the Code governing classification: courts should permit any classification proposed by a chapter 11 plan unless a dissenter can establish that the challenged classification would combine, to the dissenter's detriment, creditors or shareholders with different non-bankruptcy liquidation priorities. In cases meeting this test, the claims would fail the "substantially similar" requirement in section 1122. Detriment could be established if the plan transfers property or value preserved by the reorganization from the class in which the dissenter has been placed to another class having a different non-bankruptcy liquidation priority.

in possession financing); John Hancock Mut. Life Ins. Co. v. Route 37 Business Park Assoc., 987 F.2d 154, 159 (3d Cir. 1993) (approving and explaining In re Jersey City Medical Ctr., 817 F.2d 1055, 1061 (3d Cir. 1987), in which separate classification of medical malpractice tort claims, non-priority pension claims, and trade creditors was upheld); Heartland Federal Sav. & Loan Ass'n v. Bankruptcy Act §§ 357(1), 461(3) (repealed 1979).

See Krause, supra note 7.

At least one bankruptcy court has adopted a standard of classification consistent with this
A. The Test Expanded

The proposed test focuses on two related issues: the plan's proposed classification and the effect of that classification on a dissenting creditor or interest holder. A plan's effect is measured by determining whether the plan takes advantage of the Code's innovation of allowing transfers of value between classes having different non-bankruptcy liquidation priorities. The concepts are explored below.

1. Of Plans and Classification

Classification cannot exist separately from the plan in which it is contained. In assessing the validity of a classification, the focus should thus be on the plan itself. Since all plans must classify claims, the switch from examining classification to examining plans is relatively trivial. The switch does require, however, adoption of the proposition that even theoretically bad classification, such as the combination of secured and unsecured claims, does not provide grounds for objection unless the plan's treatment of a particular claim supplies a separate substantive reason for objection.

This can be illustrated by example. Suppose a plan's primary purpose is to restructure its equity interests. In line with this purpose, all claims are classified together, regardless of non-bankruptcy priority and the claims are paid in full, with interest, within ninety days after confirmation. In this example, it would be odd, or at least practically meaningless, to allow a creditor to object to classification of claims.

For these reasons, I propose that although the plan proponent bears the burden of obtaining confirmation, the creditor should bear the burden of demonstrating impermissible classification. For the most part, since the proposed test is fairly permissive, violations will be easy to assert and prove. Creditors will be able to tell from the required disclosure docu-

S.D. Ohio 1982) (consistent with good faith for solvent debtor to file to restructure secured debts only).

ments\textsuperscript{119} that the plan combines them with creditors having different liquidation priorities. Creditors will also be able to discern whether lower priority participants will receive under the plan property in excess of their chapter 7 liquidation entitlement.\textsuperscript{120} Any payment of this excess would thus represent a forced sharing of the going concern surplus among participants having different liquidation priorities.\textsuperscript{121} If the plan proposes such sharing, detriment to the objecting creditor can be shown because the plan proponent is skewing the vote away from the baseline priorities. Consequently, if any class combines participants having claims of equal priority with participants having lower priority claims, a dissenting creditor can establish improper classification.

What would be accomplished by this? Assume that a plan classifies accrued dividends on preferred stock with unsecured trade claims. Assume further that under applicable non-bankruptcy law, accrued but unpaid dividends have a lower liquidation priority than trade claims; that is, trade claims must be paid in full before any payment is made on the dividends. Dissenting trade creditors could successfully attack this classification by arguing that the plan proponent is using the greater numbers and values of lower priority dividend claims to rob trade creditors of value that is theirs under the absolute priority rule.\textsuperscript{122} A debtor cannot mix the claims having different non-bankruptcy priorities as tools for allocating reorganization value.

2. Of Non-Bankruptcy Priorities

The test focuses on non-bankruptcy priorities. Historically, these priorities have been the baseline for bankruptcy distributions, unless they contravene some federal interest.\textsuperscript{123} Section 726 codifies these priorities as a general guideline for liquidation.\textsuperscript{124} It assumes pro rata distribution to all unsecured claims except to the extent that the claims have special pri-

\textsuperscript{119} Under the Code, any plan proponent must provide creditors and shareholders with information relevant to their decision to accept or reject a plan. 11 U.S.C. § 1125 (1988).

\textsuperscript{120} Section 1129(a)(7)(A)(ii) states that a creditor cannot receive less under a chapter 11 reorganization plan than it would under a chapter 7 liquidation. 11 U.S.C. § 1129(a)(7)(A)(ii) (1988).

\textsuperscript{121} See supra note 9 and accompanying text.

\textsuperscript{122} Section 1129(b)(2)(B)(ii) provides that a dissenting creditor may insist that a creditor with a lower priority not receive any property until the dissenting creditor is paid. 11 U.S.C. § 1129(b)(2)(B)(ii) (1988). This is commonly known as the absolute priority rule.

Claim Classification

ority under section 507. The absolute priority rule, another restriction on distributions, has its origins in state fraudulent transfer law.

The Code also deals with the interactions of classification and the priority rules set forth in section 507. Section 1123(a)(1) specifically prohibits classification of certain types of bankruptcy priority claims. These include administrative, wage and tax claims. Section 1123, thus, prohibits, for example, the dilution of administrative trade claims with pre-petition trade claims, or the marginalization of unsecured tax claims by insider debt claims.

3. Of Detriment: The Involuntary Transfer of Reorganization Value Among Classes

Under the “democracy” aspect of reorganization, the validity of classification was secondary to the general preferences of the creditor body. The test I propose attempts to take this into account by allowing a creditor to successfully attack suspect classification only if it shows detriment. Detriment, in this sense, accounts for the purpose of classification—regulating transfers of the going concern surplus among classes having mixed liquidation priorities.

As previously indicated, the going concern surplus is that amount of a debtor’s value that contributes to its continued operation. Chapter 11 is based on the idea that this value should be preserved for the benefit of creditors and interest holders. This is evident not only from legislative history and cases construing chapter 11, but also from the operation of section 1129(a)(7). Section 1129(a)(7) requires a plan proponent to demonstrate that each participant, not each class of participants, receive at least as much in reorganization as it would in liquidation. Unless there is something more to allocate after the liquidation allocation, chapter 11 has little meaning.

1995]
The role of classification in this context is to facilitate the ongoing negotiation over the division of the going concern surplus. This includes the division within the class or classes of creditors, which was the historic function, and among classes having different non-bankruptcy liquidation priorities, the innovation of the Code in 1978. This negotiation has many facets. Creditors and equity holders may have different views on the value of the debtor, the worth of their claims and entitlements, and the risks presented by extended repayment schedules. Classification allows a plan proponent to segment the participants in such a way that while forcing the plan proponent to satisfy the court that each participant will receive an amount equal to liquidation entitlement, requires only a demonstration that a majority of each class has agreed on the division of the going concern surplus.

If, however, a properly constituted class dissents, there are manifold protections. For example, section 1129(b) requires that for any plan to be confirmed over the objection of a class, the plan must be “fair and equitable” and must not “unfairly discriminate” against the dissenting class. Moreover, confirmation requires that the plan proponent act in good faith, provide each creditor at least the liquidation value of its claim, and prove that the reorganization plan proposed is economically feasible.

These requirements are powerful protections for dissenters. They demand that the plan proponent comply with absolute priority as to the dissenting class, and provide acceptable explanations for any differential treatment given to that class. Good faith requires the plan proponent to

---

136 The origins of this protection are in § 77 relating to railroad reorganizations. “The section provides that where two-thirds of a class of creditors accept the plan, then the plan is binding upon that particular class of creditors and the minority must accept the new securities issued under the plan of reorganization. This is fair because all the minority of a particular class should expect is that a fair and equitable plan be devised and if the plan is fair then all they are entitled to is equal participation in the new securities.” H. Rep. No. 1897, 72d Cong., 2d Sess. 7 (1933).

proceed in a manner consistent with the purposes of reorganization. In other words, the dissenting class must be paid in full if any junior class retains any interest, and the payment terms of what is received must be near or equal to what other classes of equal non-bankruptcy priorities are receiving.\footnote{139}

What protects, however, dissenting creditors in accepting classes? Protecting these types of creditors is the true role of classification. Implicit in chapter 11 is the notion that while liquidation priorities are sacrosanct,\footnote{140} the allocation of the going concern surplus is not. That view is historic, tracing back to Scottish, English, and Massachusetts insolvency and bankruptcy acts of the Nineteenth century.\footnote{141}

The Code also adopted this view in its structuring and voting provisions; allocation of the going concern surplus is accomplished by creditor consensus. But since it is wasteful to specify each participant's treatment individually, classification is one way to designate distributions collectively, and to use that grouping to obtain consent to the plan. Since we honor state law priorities in the case of dissent, classification performs a gateway or threshold function for application of the absolute priority rule as modified in 1978. It ensures that a group's acceptance of treatment is not obtained at the expense of warping non-bankruptcy liquidation preferences.

In short, classification recognizes that a debtor's creditor body is often composed of many different types of claims, each of which may possess different non-bankruptcy priorities. Moreover, the membership in any one group may not be exclusive; equity holders, for example, often extend credit to their company; secured claims often have associated unsecured

\footnote{139} Against this background, the cases under § 1129(a)(10) which refer to "gerrymandering" and "artificial" classification seem to have jumped the gun. They use classification as a substantive requirement; that is, that classification must serve an ongoing business purpose other than simply obtaining confirmation. This is making the one consenting class rule do too much. It only seeks to block plans which have no creditor support even though they comply with the fair and equitable rules. The "real" class of creditors referred to in the legislative history are creditors who are "really" taking some discount on their claim; that is, those creditors whose treatment makes them impaired within the meaning of § 1124.

Add to these arguments the fact that the § 1129(a)(10) classes lead to absurd or contradictory results and one sees that courts have missed the boat. Sections 1122 and 1129(a)(10) require an almost mechanical construction. First, test whether non-bankruptcy liquidation priorities have been combined. If not, see if at least one accepting, non-insider class has had their non-bankruptcy claim alerted in any respect. If yes, then the dissenters within accepting classes must accept the plan treatment, and dissenting classes can only look to § 1129(b) for grounds to object.

\footnote{141} See supra notes 17-25.
deficiencies. The prevailing function of classification is to ensure that these chance concordances of status do not influence plan treatment.

How is this tested? Under the proposed test, a court will look at whether the acceptance of a class is tainted by affirmative votes of creditors in that class whose claims or interests have lower non-bankruptcy liquidations priorities. If a court determines that the acceptance is tainted, then the classification is improper because the plan proponent has used classification to allocate reorganization value across the boundaries of non-bankruptcy liquidation priorities.

B. The Proposed Test and Current Cases on Statutory Construction

The proposed test is also faithful to the Supreme Court's current views of the proper statutory interpretation of the Bankruptcy Code. Before analyzing this, recall that the Bankruptcy Code stands more or less alone among federal statutes. Construction of its terms is left almost exclusively to the courts; no administrative agency exists which studies and applies its expertise to the meaning of the Code's provisions. Tax statutes, for example, receive scrutiny and review by the Treasury Department; environmental statutes are the provenance of the Environmental Protection Agency; and banking and other financial statutes are reviewed by the Federal Trade Commission and the Comptroller of the Currency, among others.

Partly because of this anomaly, the Supreme Court has issued a series of statutory interpretation cases involving the Code. While the cases are not completely consistent, many take a "plain meaning" approach to the Code. A summary of this approach might state that the current members of the Court start afresh with the language in question, and then

---

142 Under the Bankruptcy Act, the Securities and Exchange Commission was involved in many chapter X cases, and solicitation of its views was mandatory (with adoption of them being advisory) in all cases in which the scheduled indebtedness exceeded $3,000,000. Bankruptcy Act § 172, 11 U.S.C. § 572 (repealed 1979).

143 Of the eighteen Supreme Court bankruptcy cases decided between 1990 and 1993, it is extremely difficult to find any consistent thread or overarching principles. Bruce A. Markell, Conspiracy, Literalism and Ennui at the Supreme Court: An Examination of Bankruptcy Cases Decided From 1990 to 1993, 41 FED. B. NEWS & J. 174 (1994). Others have drawn similar conclusions. As Thomas Kelch recently wrote:

It cannot be denied that textualist interpretation presently dominates the imagery of Supreme Court treatment of bankruptcy issues. Even this rhetoric, however, is not consistent.

It is vague. It is fragmentary. It is not homogeneous. It is not a "theory" at all. It is a muffled and ill-defined echo of a concept not deserving of the name.

attempt to apply that language consistent with what they believe to be its proper context. Just what constitutes a proper context is debatable; it seems to range from individual Justices’ perceptions unaided by anything other than case law, to legislative history and other statements that might bear on the issue. The Court does seem unwilling, however, to limit construction of the Code simply because Congress may not have considered the full ramifications of its word choice. It also seems satisfied with allowing broad Code provisions to stand.

With this background, any analysis of the proper construction of claim classification should start with section 1122. That section states, in full:

(a) Except as provided in subsection (b) of this section, a plan may place a claim or an interest in a particular class only if such claim or interest is substantially similar to the other claims or interests of such class.

(b) A plan may designate a separate class of claims consisting only of every unsecured claim that is less than or reduced to an amount that the court approves as reasonable and necessary for administrative convenience.

Note that section 1122(a) states only a rule of exclusion — what cannot

---

144 See, e.g., Pioneer Inv. Serv. Co. v. Brunswick Assoc. Ltd. Partnership, 113 S. Ct. 1489, 1495 (1993) (“Courts properly assume, absent sufficient indication to the contrary, that Congress intends the words in its enactments to carry ‘their ordinary, contemporary, common meaning.’”) (construing Bankruptcy Rule 9006) (quoting Perrin v. United States, 444 U.S. 37, 42 (1979)); Patterson v. Shumate, 112 S. Ct. 2242, 2246 (1992) (“Nothing in § 541 suggests that the phrase ‘applicable nonbankruptcy law’ refers, as petitioner contends, exclusively to state law. The text contains no limitation on ‘applicable nonbankruptcy law’ relating to the source of the law.”) (construing Bankruptcy Code § 541); Union Bank v. Wolas, 112 S. Ct. 527, 531 (1991) (“The fact that Congress may not have foreseen all of the consequences of a statutory enactment is not a sufficient reason for refusing to give effect to its plain meaning.”) (construing Bankruptcy Code § 547).

145 Taylor v. Freeland & Kronz, 112 S. Ct. 1644, 1648-49 (1992) (explaining that § 522(d) requires the trustee in bankruptcy to object to debtor’s claimed exemptions within 30 day period; there is no implied exception for exemptions taken in bad faith or without any statutory justification); Barnhill v. Johnson, 112 S. Ct. 1386, 1390 (1992) (holding that § 101(54) requires that a transfer is made when a check is honored, not when it is delivered); Connecticut Nat’l Bank v. Germain, 112 S. Ct. 1146, 1150 (1992) (holding that bankruptcy jurisdictional statute, 28 U.S.C. § 157(d), which gave courts of appeals jurisdiction from appeals of final bankruptcy orders by district courts, does not affect other avenues of appeal from district courts); Toibb v. Radloff, 501 U.S. 157, 161 (1991) (holding that § 109(d)’s silence on the business nature of debtor meant that individuals may file chapter 11 even if they are not engaged in business); Johnson v. Home State Bank, 501 U.S. 78, 87 (1991) (holding that lack of prohibition in the Bankruptcy Code regarding serial filings meant that debtors may file a chapter 13 case to reorganize home mortgage payments after discharging their personal liability in a chapter 7 case).

be classified together. It does not state a rule of inclusion — what must be classified together. This lack of explicit symmetry questions the relevancy of section 1122 to the question of what claims must be classified together. If in fact it is relevant, questions still exist as to what test section 1122 provides for such combinations.

While the Court has not addressed this issue directly, it has examined other Code provisions that do not completely cover their subject matter. In *Grogan v. Garner,* for example, the Court addressed whether pre-Code practice of assessing the dischargeability of a claim was to be determined by a clear and convincing standard, or by a preponderance of the evidence standard. After noting that "[t]he language of § 523 does not prescribe the standard of proof for the discharge exceptions," the Court began its “inquiry into the appropriate burden of proof under § 523 by examining the language of the statute and its legislative history.” It found that the “legislative history of § 523 and its predecessor, 11 U.S.C. § 35 (1976 ed.), is . . . silent,” and “[t]his silence is inconsistent with the view that Congress intended to require a special, heightened standard of proof.” It thus adopted the normal federal standard of preponderance of the evidence.

Similarly, in *Connecticut National Bank v. Germain,* the Court addressed the addition to the judicial code of a new section governing appellate jurisdiction in bankruptcy cases. The addition seemed to limit the jurisdiction of circuit courts in appeals from interlocutory orders issued by district courts who act as appellate judges in bankruptcy. The problem was, however, that Congress did not also amend the general stat-

Applying these cases to section 1122 is thus relatively easy. Section 1122(a) addresses only improper combinations of claims, not allegedly improper segregation. It is silent on what claims "must" be classified together. According to the Supreme Court, this silence should be construed as a lack of regulation of this aspect, precluding the interpolation of terms such as "reasonable" or "rational" into the statute. The underlying assumption here is that had Congress intended for such modifiers to be inserted, Congress would have placed them there.

Examining section 1122(b)'s administrative convenience class exception leads to a similar result. Some might interpret the statute's reference to "unsecured" claims to mean that classification by non-bankruptcy priority is the norm and that this priority can only be varied by meeting the requirements of reasonableness and necessity laid out in subsection (b).

This argument, however, does not address the text of subsection (a) which, regardless of subsection (b)'s text, does not refer to inclusion. Moreover, subsection (b) is expressly excluded from (a), thus negating legislative history if the statutory language is unclear.

Many courts seem to permit separate classification only if the plan proponent can articulate some reasonable or rational business or economic justification for doing so. Boston Post Rd. Ltd. Partnership v. FDIC (In re Boston Post Rd. Ltd. Partnership), 21 F.3d 477, 483 (2d Cir. 1994); Steel Case, Inc. v. Johnston (In re Johnston), 21 F.3d 323, 328 (9th Cir. 1994); Oxford Life Ins. Co. v. Tucson Self-Storage, Inc. (In re Tucson Self-Storage, Inc.), 166 B.R. 892, 898 (Bankr. 9th Cir. 1994). Under the Court's view of statutory interpretation, these considerations are no more important than those which attempt to assess motivation when examining classification.

On this point, see Carlson, supra note 7, at 574.

As stated in In re Bloomingdale Partners, 170 B.R. 984, 989-90 (Bankr. N.D. Ill. 1994): Subsection (b) of § 1122 is not superfluous because it expressly authorizes the joint classification of claims that are not 'substantially similar,' notwithstanding the general prohibition on such joint classification contained in § 1122(a), provided only that the amounts of the claims are less than a certain amount. The first words of § 1122(a) are "Except as provided in subsection (b) of this section. . . ." Subsection (b) is explicitly an exception to the prohibition contained in subsection (a) against classifying claims that are not 'substantially similar' in the same class. Consequently, the plain language of the Code provides no express guidance concerning any restrictions on the separate classification of 'substantially similar' claims.
any claim that the two need to be consistent. In short, subsection (b)'s existence can be explained by a desire to legitimize the pairing of claims based not on the relationship of the creditor to the debtor, but simply on the amount of the claim, and the need to ensure that the amount of the dividend check exceeds the amount of postage necessary to send it to the creditor. This interpretation of section 1122 is firmly rooted in history. The English Bankruptcy Act of 1869, the American Bankruptcy Act of 1874, and the 1884 Massachusetts Act all explicitly treated smaller claims differently from larger claims.

Traditional legislative intent analysis also supports the proposed construction of section 1122(a). The legislative history of section 1122 simply states that it "codifies current case law surrounding the classification of claims . . . ." Both chapters XI and XII permitted "division of [unsecured] debts into classes and the treatment thereof in different ways or upon different terms . . . ." In addition, chapter X provided that a plan "shall include in respect to creditors generally or some class of them, secured or unsecured, . . . provisions altering or modifying their rights . . . ." Although Congress used different words in each context, leading to different interpretations, both classification schemes allow separate classification of claims having the same liquidation priority.

170 1869 Act § 126.
171 1874 Act § 17.
176 See BROUDE, supra note 15, at ¶ 9.02[2].
177 Randoph Haines is critical of this interpretation, citing to the text of the Bankruptcy Commission's report. Haines, supra note 7, at 2. Courts have also been critical:

It is difficult to follow Congress' instruction to apply the old case law to the new Code provision. The old case law comes from two different sources. Chapter X of the old Act was designed for thorough financial reorganizations of large corporations. It imposed a very formal and rigid structure to protect the investing public. Chapter XI was designed for small nonpublic businesses, did not permit the adjustment of a secured debt or of equity, and thus contained few investor-protection measures. The idea behind Chapter 11 of the Code was to combine the speed and flexibility of Chapter XI with some of the protection and remedial tools of Chapter X. Thus, Congress has incorporated, for purposes of interpreting section 1122, the case law from two provisions with different language, that were adopted for different purposes, and that have been interpreted to mean different things.
As a matter of practicality, we cannot revert to non-bankruptcy law priorities to provide a definition of what must be included in particular classes. That strategy risks making section 1122(a) irrelevant. Indeed, Congress could have done just this by making the chapter 7 distribution provisions mandatory in chapter 11. Under chapter 7, and most non-bankruptcy liquidations, non-priority unsecured creditors are all treated the same. They share pro-rata in whatever is left over after the secured and priority creditors have had their claims paid. Moreover, if history had adopted that view, classification would have been irrelevant in chapter XI, since it could only modify unsecured claims.

In short, if section 1122(a) is supposed to mirror non-bankruptcy law priorities, it could have been done more directly and with less words. Cases and commentators, however, have taken great pains to distinguish the different motives that groups of unsecured creditors with the same liquidation priority might have.

The original report of the Bankruptcy Commission proposed the following language to handle classification: “The administrator [now the plan proponent] shall designate classes of creditors and equity security holders which are of substantially similar character and the members of which enjoy substantially similar rights.” H.R. Doc. No. 137, 93d Cong., 1st Sess., pt. II, at 241 (1973). The note to this section stated that “[t]he liquidation priorities are applicable and claims of a substantially similar nature must be included in the same class, except that small claims may be separately classed.” Id.

178 It also may make § 1124’s provisions on impairment superfluous, since in a world where all unsecured creditors get equal treatment, there is little need to test impairment as strictly as done in § 1124. See 5 COLLIER ON BANKRUPTCY ¶ 1122.04, at 1122-20 (15th ed. 1993).

180 Actually, chapter 7 does not treat all non-priority, unsecured claims alike. Any fines, penalties, forfeitures, or multiple, exemplary, or punitive damages are singled out for lesser treatment. 11 U.S.C. § 726(a)(4) (1988).

181 See, e.g., Steelcase Inc. v. Johnston (In re Johnston), 21 F.3d 323 (9th Cir. 1994) (finding it proper to separately classify unsecured claim which is being hotly disputed in separate litigation); Frito-Lay, Inc. v. LTV Steel Co. (In re Chateaugay Corp.), 10 F.3d 944, 956-57 (2d Cir. 1993) (holding that separate classification of tax lessors based upon whether they independently provided debtor in possession financing is allowed); John Hancock Mut. Life Ins. Co. v. Route 37 Business Park Assocs., 987 F.2d 154, 159 (3d Cir. 1993) (approving and explaining In re Jersey City Medical Ctr., 817 F.2d 1055, 1056 (3d Cir. 1987)), in which separate classification of medical malpractice tort claims, non-priority employee benefit plan claims, and general trade creditor claims were upheld); Heartland Fed. Sav. & Loan Ass’n v. Briscoe Enter., Ltd., II (In re Briscoe Enter., Ltd., II), 994 F.2d 1160, 1167 (5th Cir. 1993) (upholding separate classification of unsecured claims held by the City of Fort Worth, and other creditors, in single-asset real estate case, where the City contributed cash to subsidize rentals in moderate to low income housing); Teamsters Nat'l Freight Indus. Negotiating Comm. v. United States Truck Co. (In re United States Truck Co.), 800 F.2d 581, 587 (6th Cir. 1986) (upholding separate classification of labor union based on such entity’s “non-creditor”
C. The Proposed Test and Section 1129(a)(10)

Some courts and commentators assert that a test such as the one proposed above either makes section 1129(a)(10) a "nullity" or "eradicates completely" its effects. They argue that Congress could not have had in mind such a flexible standard for section 1122 when enacting section 1129(a)(10). The problem with this argument is its premise. A flexible or expansive reading of section 1122 has little to do with section 1129(a)(10). Only if one believes that section 1129(a)(10) was intended to prevent reorganization of single asset bankruptcies, a result belied by current efforts at bankruptcy reform, can one justify this premise.

To be sure, section 1129(a)(10) incorporates the notion of an "impaired class." The "class" part of this phrase, however, does not cause the problem. Section 1124 presents the real issue. This section defines impairment as the alteration of any of the creditor's "legal, equitable or contractual rights to which such claim or interest entitles the holder of such claim or interest." Given the review of recent Supreme Court cases above, it stretches logic to think that the current Court would read section 1124 to mean any real or substantial alteration.

If we would not insert such concepts into section 1124, why do we think that we can insert them in section 1122? Yet, section 1129(a)(10) really does not do this. The only existing legislative history behind section 1129(a)(10) indicates that Congress was concerned with a "real" class of

interests in reorganization).

183 See Melzer, supra note 7, at 302.
184 See, e.g., Conroy v. Aniskoff, 113 S. Ct. 1562, 1566 (1993) (Court unwilling to ignore plain meaning unless Court was able to "say that Congress would have found our straight-forward interpretation [of the statute] and application of its words either absurd or illogical."); Public Citizen v. Department of Justice, 491 U.S. 440, 454 (1989) (courts can look beyond statutory language when plain meaning would "compel an odd result") (citing Green v. Bock Laundry Mach. Co., 490 U.S. 504, 509 (1989)); EEOC v. Commercial Office Prod. Co., 486 U.S. 107, 120 (1988) (plurality opinion) (rejecting the more natural reading of statutory language because such an interpretation would lead to "'absurd or futile results . . . plainly at variance with the policy of the legislation as a whole'"). Cf. Connecticut Nat'l Bank v. Germain, 112 S. Ct. 1146, 1149 (1992) ("We have stated time and again that courts must presume that a legislature says in a statute what it means and means in a statute what it says there.").

impaired creditors. What does this mean? Many have rushed to the conclusion that this means that the impaired class should be "substantial," that is, should somehow matter in the reorganization. This may be the wrong lens through which to look at the amendment. It can just as easily be interpreted to address the problem of the "maximum cramdown;" the specter that a plan agreed to by no class of non-insider creditors could be confirmed.

Even with an expansive reading of section 1122, section 1129(a)(10) continues to have meaning. It prevents impaired insiders, who may have legitimate debt claims, from counting towards the necessary one class. It also prevents a non-impaired class from being the required class of accepting creditors because at least one class of impaired creditors must accept.

Critics argue that this is not enough. They view the purpose of section 1129(a)(10) differently, and see expansive classification as antagonistic to that purpose. One possible response to this argument is that the current Court interprets imputed purpose as subordinate to the actual text used. How else can the Court construe section 522(l) as not requiring good faith? It stretches the imagination to construe the very mechanical nature of sections 1122, 1124, and 1129(a)(10) as containing substantive restrictions on the motives of plan proponents.

This leap of the imagination falls flat when one considers that other provisions of the Code regulate the nexus between the result obtained and the motive used in obtaining that result. If dissenting creditors believe that the vote of the impaired class was improperly obtained, they can seek to disallow it on the good faith grounds explicitly provided for in section 1126(e). They can also attempt to thwart the whole plan as not being proposed in good faith, another requirement explicitly provided for in section 1129(a)(3).
The real issue is that it is procedurally cheaper to knock out a plan on classification grounds. If lawyers can present the issue as a question of law, there need be no discovery taken on the motives of the plan proponent. Dissenters can then object to the classification at the disclosure statement stage, rather than during a plan confirmation.

From a policy standpoint, this may make sense. Maybe we should limit what a plan can do before creditors vote. That certainly was the case under equity receiverships and chapter X, but we do not write on a clean slate. The Code attempts to balance all interests, including those held by the debtor. The language in the Code allows for a low threshold for impairment, and imposes nothing but negative restrictions on classification. This structure, chosen by Congress, should control, not the imputed purposes suggested by others.

D. The Proposed Test Applied

A final objection to the proposed test is that it would validate the creation of a class having only one "sympathetic" creditor, whose claim is only trivially altered, and that a plan proponent can use this one-creditor class to cram down a plan over the dissent of more substantial creditors.

and purposes of the Code); Stolrow v. Stolrow's, Inc. (In re Stolrow's, Inc.), 84 B.R. 167, 172 (Bankr. 9th Cir. 1988) (good faith requires that a plan achieve a result consistent with the objectives and purposes of the Code and fundamental fairness in dealing with one's creditors); In re Jorgensen, 66 B.R. 104, 109 (Bankr. 9th Cir. 1986) (good faith requires that a plan achieve a result consistent with the objectives and purposes of the Code and fundamental fairness in dealing with one's creditors); In re New Valley Corp., 168 B.R. 73, 80-81 (Bankr. D.N.J. 1994) ("It is generally held that a plan is proposed in good faith if there is a reasonable likelihood that the plan will achieve a result consistent with the objectives and purpose of the Bankruptcy Code. . . . A further refinement of the test for whether a plan is proposed in good faith is found in the notion that the plan must provide for fundamental fairness in dealing with creditors."); In re Rivers End Apartments, Ltd., 167 B.R. 470, 475-76 (Bankr. S.D. Ohio 1994); In re Gregory Boat Co., 44 B.R. 361, 366 (Bankr. E.D. Mich. 1992) ("Under one view, the good faith requirement of § 1129(a)(3) is met if the plan will fairly achieve a result consistent with the objectives and purposes of the Bankruptcy Code. . . . Under another view, the good faith requirement is met if the plan was proposed with honesty and good intentions, and with a basis for expecting that a reorganization can be effected. . . . Under a third view, good faith requires fundamental fairness in dealing with one's creditors."). See also Mutual Life Ins. Co. of N.Y. v. Patrician St. Joseph Partners Ltd. Partnership (In re Patrician St. Joseph Partners Ltd. Partnership), 169 B.R. 669 (D. Ariz. 1994).

193 Compare 11 U.S.C. § 1121(b) (1988) (stating that only the debtor, not the debtor in possession or other estate representative, may file a plan during first 120 days of case) with 11 U.S.C. § 1129(c) (1988) (in case of two confirmable plans, the court is directed to consider "the preferences of creditors and equity security holders in determining which plan to confirm").

Good faith limitations should handle this objection adequately. Some might think, however, that there is something odd in the creation of a one-creditor class, but this objection is too narrow to be persuasive. The next section demonstrates the narrowness of this objection by applying the proposed test to common classification schemes already approved by courts.

1. Secured Claims and Equity Interests

The first step in evaluating the proposed test is to recall that current practice validates, and even mandates, single-creditor classes in some cases. Perhaps the most common single-creditor classes are holders of secured claims. Courts have routinely classified these types of claims separately from unsecured creditors, at least implicitly recognizing that the difference in liquidation priorities justifies such action.

Even claims secured against the same collateral can result in separate classification. In these cases, separate classification occurs because each secured claim holds a different priority in the same collateral.

At the other end of the spectrum, separate classification is also the rule and not the exception. Usually, different classes of equity securities are explicitly distinguished by virtue of different non-bankruptcy liquidation priorities and, therefore, must be classified separately. In small companies, this can often result in one-creditor classes.

2. Deficiency Claims—Both Recourse and Non-recourse

One distinct feature of the Code is that it bifurcates undersecured
claims. In other words, it treats the holder of a secured claim for which the collateral is worth less than the debt owed as holding two claims — a secured claim equal to the value of the collateral, and a deficiency, or unsecured, claim for the remainder.\(^{199}\)

As set forth above, these bifurcated claims have different non-bankruptcy priorities.\(^{200}\) The secured claim will be paid out of the collateral, and the unsecured claim will be paid pro rata with all other unsecured claims. Given the logic of the cases set forth above, it follows that the secured claim should be separately classified.

Can they be classified together? Under the proposed test, the liquidation priorities are different, so they should not be combined. The only exception would be if the holder of the secured claim consents, and if the only source of payment to the class would be collateral proceeds.\(^{201}\) In that case, the secured creditor effectively waives its unsecured claim because the collateral is worth less than the claim, and the only source of repayment would be the collateral proceeds.

This discussion leads to the conclusion that, in at least those cases in which the lender has a non-bankruptcy deficiency claim, it should be permissible to combine the deficiency claim with all other unsecured claims. This would create a class in which all members' claims have the same liquidation priority. It would, therefore, be presumptively proper. Plan proponents who are not the holders of such claims, however, may have incentives to separate the claims. Can they do this? Must they do it?

Under the proposed test, classification must be separate if the deficiency claim is recognized only by virtue of the application of section 1111(b).\(^{202}\) Since these claims have a different non-bankruptcy liquidation priority, combining them would dilute one group's non-bankruptcy enti-

\(^{201}\) If the plan proponent structured the plan so that non-collateral proceeds would be used to pay the combined class, then other unsecured creditors could successfully allege that the plan combined claims which were not "substantially similar." 11 U.S.C. § 1122(a)(1988). Their damage would be the diversion of going concern surplus to a class having a different liquidation priority. Alternatively, the class could dissent and claim that any disparity in payment was because the classification unfairly discriminated in violation of § 1129(b)(1).
\(^{202}\) 11 U.S.C. § 1111(b) (1988). This can happen in at least three circumstances. First, the claim can be non-recourse by contract. This will be the case with many single asset debtors because their lenders agreed to look only to the value of the security. Second, the claim can be non-recourse for lack of privity, such as when a debtor obtains property subject to an existing lien, and the value of the property obtained is less than the debt secured. See 680 Fifth Ave. Assocs. v. Mutual Benefit Life Ins. Co. (In re 680 Fifth Ave. Assocs.), 29 F.3d 95, 98 (2d Cir. 1994). Or, third, it can arise by operation of law, such as the application of state anti-deficiency statutes.
tlements. The example above\textsuperscript{203} demonstrates how this is possible, as does Professor Carlson's solvent general partner example.\textsuperscript{204}

Do not forget, however, about non-mandatory separate classification. This would arise when the lender's deficiency claim is entitled to share pro rata under non-bankruptcy law with other unsecured claims, but is isolated in a one-creditor, dissenting class. The holder of the deficiency claim has three protections in this instance without relying on allegedly bad classification. First, the plan must comply with the "fair and equitable" rule.\textsuperscript{205} This means that all reorganization value must be allocated to the dissenting class before any junior class receives anything. Second, the plan must not "discriminate unfairly" against the dissenting class. In short, the payment made and its terms must not unreasonably favor one class to the detriment of the dissenting class. Finally, the plan must be proposed in good faith. That is, it must reasonably be expected to achieve results consistent with the Bankruptcy Code.

In this context, the treatment of the separately-classed creditor should bear no relation to the satisfaction of the requirements of section 1129(a)(10). Since the separately-classed creditor has all the protections listed above, there is no need to investigate impairment in those consenting classes beyond the level required in section 1124. Those who express outrage or find fault with such separate classification either forget the protections afforded dissenting classes by the Code, or are not satisfied with (and not completely honest about) the level of protection that the Code does provide.

There is another way to look at the issue. By opting for liquidation, the lender takes all the risk and gets all the reward of any uncertainties in value or any upswings in price. Any gain over values realized at foreclosure is the lender's and the lender's alone.\textsuperscript{206} That fact may influence lenders' motives towards liquidating the property of the debtor. Put another way, not all players may have the same incentive to realize for the benefit of all participants the excess of reorganization value over liquidation value.

Separate classification can thus restore the balance by counting the

\textsuperscript{203} See supra notes 104-09 and accompanying text.
\textsuperscript{204} See Carlson, supra note 7.
votes of only creditors truly interested in reorganization. Those who dissent, the holders of recourse deficiency claims, must receive treatment which is fair and equitable and not unfairly discriminatory. That is their ultimate protection. If the reorganization goal has any independent vitality, an evaluation of motives should tip the scales in close cases in favor of permitting separate classification.

3. Regular Trade Claims

Under the proposed test, a class consisting of any combination of unsecured creditors is permitted. Evidence of this protection is that if any class dissents, it will always have the right to invoke its absolute priority and anti-discrimination rights under section 1129(b).

The other reason to allow such separate classification is practical. One aspect of the history of classification is the continuous effort to find appropriate acceptance levels necessary to bind non-consenting creditors. Classification is bound not only to liquidation priorities, but also to post-confirmation treatment. The ability to separately classify is the ability to treat certain creditors differently.

With most business debtors, there are several instances in which differential treatment is desirable. Different groups of creditors may have different risk preferences. Trade creditors may be more concerned with the preservation of a customer or supplier, and may take equity interests in reorganization; institutional investors may simply wish to receive cash. Tort claimants may have no incentive to keep the business intact; ordinary course of business creditors may have every incentive. The point is that if classification is equivalent to liquidation priority, then plan proponents lose great flexibility in structuring their plans so as to maximize recovery. Given the preference for reorganization over liquidation, this may not make sense.

---

207 If the plan proponent cannot return more than liquidation value to creditors, the case should be dismissed anyway since the plan proponent will not be able to meet the requirements of § 1129(a)(7).

208 Indeed, the legislative history seems to take as a given that unsecured creditors could be placed in more than one class. H.R. REP. No. 595, 95th Cong., 1st Sess. 416 (1977). See BROUDE, supra note 15, at ¶ 9.02(2).

209 These rights are in addition to receiving the benefit of the normal showings a plan proponent must make, such as a showing that the plan is proposed in good faith, that the plan is in the best interests of creditors, and that the plan is feasible.

211 See COLLIER ON BANKRUPTCY, supra note 178, at ¶ 1122.04, at 1122-20.
In the most common case, trade creditors are willing to take more risk, and institutional creditors will opt for more immediate payment. Under our current system, this problem is resolved by group negotiation, bounded by dissenting parties being able to invoke the cramdown and confirmation protections mentioned above. To give such negotiation more fluidity, the ability to treat creditors differently is critical. That ability is protected by the ability to classify separately.

4. Other Possible Combinations

Classification is mechanical and easy to apply partly because it is difficult to anticipate all possible circumstances in which separate classification may be appropriate. So long as the various good faith and other concerns exist, however, a link between classification and subjective motive is not necessary or appropriate.

So when else may a plan proponent separate creditors having the same liquidation priority? Creditors whose interests are wholly antithetical to reorganization may present a compelling case for separate classification.\(^\text{212}\) For example, a competitor who has obtained a judgment, or has a claim, for unfair competition may want to rid itself of the debtor. Relations between a landlord and its tenant may have deteriorated to the point of impasse. Groups such as trade unions may have reputations for toughness at stake which exceed the private stake in the particular reorganization.\(^\text{213}\)

These types of creditors are "irritants" in the sense that their interests are contrary to the reorganization goal of chapter 11. This does not mean that their claims are less-deserving. It does suggest, however, that not all of the creditors have equal, or even similar, interests in the continuation of the debtor.

Cases also exist in which separate classification may be needed to meet policy concerns.\(^\text{214}\) A plan which proposes to distribute stock in the

\(^{212}\) See, e.g., Steelcase Inc. v. Johnston (In re Johnston), 21 F.3d 323, 328 (9th Cir. 1994) (finding it proper to separately classify unsecured claim which is being hotly disputed in separate litigation); Teamsters Nat'l Freight Indus. Negotiating Comm. v. United States Truck Co. (In re United States Truck Co.), 800 F.2d 581, 587 (6th Cir. 1986) (upholding separate classification of labor union based on such entity's "non-creditor" interests in reorganization).

\(^{213}\) United States Truck Co., 800 F.2d at 587 (noting that labor union had "non-creditor" interests to protect in reorganization).

\(^{214}\) See, e.g., Frito-Lay, v. LTV Steel Co. (In re Chateaugay Corp.), 10 F.3d 944, 956-57 (2d Cir. 1993) (separate classification of tax lessors based upon whether they independently provided debtor in possession financing); Heartland Fed. Sav. & Loan Ass'n v. Briscoe Enter., Ltd., II (In re Briscoe Enter., Ltd., II), 994 F.2d 1160, 1167 (5th Cir. 1993) (upholding separate classification in
reorganized debtor in cancellation of claims may give rise to antitrust or other similar claims. If a governmental entity holds a claim due to the structure of a subsidy or other program offering non-market pricing, separate classification of that claim to obtain separate treatment is appropriate, even if it creates a single-creditor class.\textsuperscript{216} Similarly, a governmental program may artificially designate a subsidy as a debt, and payment of that subsidy might prejudice the claims of normal creditors.\textsuperscript{216} Finally, some courts have separately classified tort claims from claims incurred in the normal course of business.\textsuperscript{217}

Lastly, can creditors be separately classified based on subordination provisions?\textsuperscript{218} The proposed test would allow this.\textsuperscript{219} All unsecured, non-priority creditors are the same to the debtor because quite often the debtor is not even a party to the subordination agreement. Since the creditors all have the same non-bankruptcy liquidation priority, as seen above, the plan proponent may classify the claim in any manner it wishes. The fact that the creditors are the same as far as the debtor is concerned also dispenses with the question of whether the claims must be classified together; they may, or they may not.

May the plan combine junior and senior unsecured creditors in the same class? Again, if subordination works as a two-step process — one distribution to creditors, and a second among creditors in accordance with the subordination agreement — the proposed test permits the combining of the class. Although this affects the negotiation process, it actually seeks to restore the relative positions of the parties set by the subordination

\textsuperscript{1995}
agreement. It allows the larger party to control the reorganization, while section 510(a) preserves the benefit of the subordination bargain for all plan treatment.  

V. Conclusion

Classification can be a confusing issue, especially if its historical origins are not considered. It also can lead one astray if it is viewed as an end in itself, rather than as a part of a coordinated and complex scheme for achieving reorganization.

Many parts of the reorganization process both require and rely upon flexible classification. Those adversely affected by classification generally have recourse through the general requirements of confirmation—good faith, the best interests of creditors test, and feasibility. If those adversely affected are members of a dissenting class, they also have the benefit of the special requirements of cramdown, which includes the availability of the absolute priority rule and the prohibition against unfair discrimination in treatment. This article has argued that a court should reject a proposed classification only if it negatively affects these general protections.

As recognized by section 1122, negative impact arises only when a plan proponent combines claims or interests having different non-bankruptcy priorities into one class. When that occurs, the class rights anticipated and protected by the cramdown powers become diluted. Although instances of these types of classification rarely occur, they should be disallowed.

In other cases, however, classification should be relatively open and free. Such a result is consistent with the historical roots of classification. Classification was originally used to ensure that creditors who voted together had the same interest in the debtor, judged primarily, but not exclusively, by their relative liquidation priorities as against the debtor. Open and free classification also comports with the Bankruptcy Code's text. When the plan proponent's motive becomes an element to be adduced in the context of claim classification, however, the system loses much of its predictability. Unfortunately, many courts seem clueless on this point.

To attempt to restore classification to its proper place, this article has suggested that any classification is presumptively permissible so long as it

---

does not combine participants with different non-bankruptcy liquidation priorities. To the extent that this formulation permits single-creditor classes, and classes not generally permitted by many courts, this is acknowledged and explained. In the end, perceived abuses should be regulated, not through mangling the words of section 1122, but through applying the other and varied protections provided under the Code to all creditors.
